INVESTING IN YOUR SUCCESS.

Everything starts with a seed. Every crop. Every decision. Every investment. Which is why there are a few things about CROPLAN® seed, our people, customers, and values that we'd like you to know.

First, we take your satisfaction with our product performance personally. We want to demonstrate the incredible amount of respect we have for our customers and their farms in every action and decision we make. And there is, perhaps, no better way to demonstrate that respect than to bring you new and special seed products that exceed your expectations and move your farm forward. This principal drives our actions every day. And it likely wouldn't be possible without one core attribute – our independent mentality to running our seed business.

You see, CROPLAN seed sits in a very unique place in today's seed industry. We can choose where to invest to best serve our customers. And those investments show up in places you might not expect or where they're easy to look past.

Take our Answer Plot® testing program. Answer Plot trials are an outstanding way for us to invest into your success. They provide an incredible amount of data and understanding, even before a product ever reaches market. Through one of the most robust investments in seed performance research anywhere in this industry, we are able to rapidly bring new, advanced genetics and technologies to market, and to your farm. This investment in our products and your success is easy to overlook. But it's one of the key advantages you bring to your farm every time you plant CROPLAN seed.

Of course data can only get you so far. To constantly push the limits of genetic gain, you need an elite team of product development experts. Today, we have eight seed specialists, with over 150 years of experience, completely focused on uncovering, observing and evaluating the latest seed genetics and technology. And because we are independent, this team can search all corners of the industry, and commercialize only the products we believe will serve our customers best. We believe this objective endorsement of products creates a product lineup that is truly unique in this industry today.

When we do it all correctly, our independent-minded process brings high performing products to market in a way that makes a difference for the people we do business with. So be sure to take a look at the performance information and product ratings enclosed in this guide. It's just outstanding.

Finally, we'd like you to know that you can only find CROPLAN seed at your local crop input retailer. Today, we believe leading crop input retailers sit in the best place in the seed industry to truly understand what seed will perform best.

Seed can no longer be a one-dimensional decision. The outcome on any acre can only be most successful when the seed decision is made in concert with many other crop input decisions. Decisions your leading crop input retailer is uniquely qualified to make. Although there are many choices of how and where to sell, we choose to only sell CROPLAN through this network of leading crop input retailers. We firmly believe working exclusively with the very best retailers in America is a strategic advantage.

You see, our independence is so important to us because it allows us to make our own business decisions. Those decisions take any business

straight back to their core principles, which we hope you'll see and feel every time you choose to plant CROPLAN seed.

- Put every last drop of effort into creating the very best seed products possible.
- Always deliver value. Even if it costs a little more.
- Earn the customer's trust, and treat people fairly.
- Be dedicated to doing the basics better than everyone else – there are no quick fixes in the seed industry.
- Work with elite partners who understand the entire acre – our retail seed experts.
- Understand we still have a lot of improvements to make; be committed to making them.

That's it.

On the following pages you'll find our commercial products for the 2025 crop year. Please feel free to review and ask your local crop input retailer for their opinion on what may fit your farm best. And know that when you choose CROPLAN seed, you have a team of CROPLAN employees behind each of these products who will lay it all on the line for your success.

SOPHISTICATED DATA. THE KEY TO UNLOCKING YOUR FARM'S POTENTIAL.

Optimize Seed ROI

To produce farm topping yields, you need to do many things right. And that starts with CROPLAN. It's seed that puts you on the path to maximizing ROI on each acre, beginning with exceptionally high performing genetics, which carry the latest traits and technology. But even bigger advantages come with the data and intelligence we build on top of these cutting edge corn hybrids.

ANSWER PLOT® RESEARCH PROVIDES POPULATION, NITROGEN AND FUNGICIDE RESPONSE DATA FOR ALL CROPLAN CORN HYBRIDS.

That means you can fine tune management and increase yield potential in the most economically efficient manner.

- There's a 29.5 bu/A average yield response advantage¹ when hybrids are managed according to their Response to Nitrogen (RTN).
- Then, there's a 13.1 bu/A average yield response advantage¹ when hybrids are managed according to their Response to Fungicide (RTF), which not only guides the fungicide decision, but also the application timing.
- Testing and correlating plant populations, RTN and RTF allows us to make sense of the almost infinite interactions between population, nitrogen, fungicide and yield response for each hybrid.

EACH HYBRID IS DIFFERENT, AND THEIR AGRONOMIC REQUIREMENTS ARE, TOO.

Putting every hybrid into the same environment won't maximize your ROI. Instead, give each hybrid what it needs when it needs it. And just as importantly, eliminate actions that don't provide the yield and revenue impact you desire.

Only CROPLAN seed provides this level of intelligence. And you can only find CROPLAN seed hybrids at the best retailers in America.

ZINC SEED TREATMENT IN THE BAG

Zinc is proven to help corn get off to a fast, healthy start and encourage stronger root development. CROPLAN is one of the only seed brands with zinc on every corn hybrid, in every bag, with no overtreatment or upcharge. It's a key component of our proprietary corn seed treatment – Fortivent® Plus. In 2018 Answer Plot® testing, Fortivent Plus showed a +4.7bu/A average advantage over untreated CROPLAN products.

Fortivent® Plus Features and Benefits

- All CROPLAN® hybrids come with Poncho® VOTiVO® seed treatment.
- Provides enhanced Pythium control with ethaboxam fungicide.
- Includes Fortivent Zn for success in early-season growth and root development.
- Includes 100% replant offering on all CROPLAN® hybrids.

When you choose CROPLAN seed, you're gaining an agronomic edge which can help maximize ROI potential.

CROPLAN

CROPLAN® TRAIT LETTERING FOR CORN HYBRIDS

Descriptive hybrid numbering and trait lettering systems are used for CROPLAN® corn hybrids.

KEY	HYBRID	TRAIT	LOGO
SS/RIB	SmartStax® RIB Complete® Corn Blend	Two mode of actions working against corn rootworm for below ground protection. As a RIB Complete® brand corn blend, means refuge compliance for the Corn-Growing Area is easier than ever. Two more sites of action provide tolerance to glyphosate and glufosinate herbicide applications.	
SSPRO/RIB	SmartStax® PRO Complete® Corn Blend	For corn on corn acres, or those with corn rootworm damage, SmartStax® PRO technology contains three different modes of action against corn rootworm. SmartStax® PRO Technology combines the proven benefits of SmartStax® Technology with an additional, unique RNAi-based mode of action — becoming the first product with three modes of action for corn rootworm control. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
VT4P	VT4PRO™ RIB Complete®	For corn on corn acres, or those with corn rootworm damage, VT4PRO™ Technology combines the three built-in modes of action in Trecepta® Technology, an elite above-ground pest package for corn, with two below-ground modes of action to help manage corn rootworm. VT4PRO Technology will provide farmers protection against above-ground pests including European corn borer, southwestern corn borer, fall armyworm, black cutworm, western bean cutworm and corn earworm. VT4PRO contains Roundup Ready 2 Technology® which allows the corn plant to withstand glyphosate treatments. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn- Growing Area is easier than ever. Products available with and without refuge in bag options.	
VT2P/RIB	VT Double PRO® RIB Complete® Corn Blend	For rotated acres with no visible corn rootworm, and low to moderate risk. Dual modes of action for maximum protection against above-ground pests, like European and Southwestern corn borers and fall armyworm. An additional site of action helps plants withstand glyphosate to prevent weeds from competing with corn. As a RIB Complete® brand corn blend, means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
RR	Roundup Ready® Corn 2	Roundup Ready Corn 2 enables consistent field-to-field weed control. Engineered for glyphosate tolerance, this technology allows you to apply Roundup® brand agricultural herbicides and other labeled glyphosate products.	
TRE/RIB	Trecepta® RIB Complete® Corn Blend	For rotated acres with no visible corn rootworm, and low to moderate risk. Trecepta® Technology helps reduce yield loss by protecting your corn crop from a wide range of above-ground pests. Built on the proven VT Double PRO® Technology, Trecepta Technology gives you more complete control against corn borers (European and southwestern), fall armyworm, western bean cutworm, black cutworm and corn earworm. Trecepta contains Roundup Ready 2 Technology® which allows the corn plant to withstand glyphosate treatments. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
DGVT2P/RIB	DroughtGard® VT Double PRO® RIB Complete® Corn Blend	VT Double PRO® RIB Complete® corn blend contains dual modes of action for maximum protection against above-ground pests, like European and Southwestern corn borers and fall armyworm. DroughtGard® Hybrids products are designed to help corn plants resist drought stress and minimize the risk associated with one key, unpredictable factor: The weather. The DroughtGard® Hybrids gene helps the plant create proteins that are essential for growth, helping to support yield opportunity when water is scarce. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
D	Duracade™	The Duracade™ trait stack provides multiple modes of action against corn rootworm and corn borer, as well as suppression of ear-feeding insects. This trait stack includes a novel, alternate mode of action to help preserve trait durability and delay insect adaptation for long-term field health, and the convenience of an integrated E-Z Refuge® seed blend.	
PCE	PowerCore® Enlist®	Herbicide flexibility with the Enlist® weed control system, which offers tolerance to 2,4-D choline in Enlist® herbicides in addition to glufosinate and glyphosate. Insect control against black cutworm, fall armyworm, European and southwestern corn borers, and corn earworm. Enlist weed control system provides a whole-farm solution across corn, soybean and cotton acres.	

SOPHISTICATED DATA. THE KEY TO UNLOCKING YOUR FARM'S POTENTIAL.

Optimize Seed ROI

To produce farm topping yields, you need to do many things right. And that starts with CROPLAN. It's seed that puts you on the path to maximizing ROI on each acre, beginning with exceptionally high performing genetics, which carry the latest traits and technology. But even bigger advantages come with the data and intelligence we build on top of these cutting edge corn hybrids.

ANSWER PLOT® RESEARCH PROVIDES POPULATION, NITROGEN AND FUNGICIDE RESPONSE DATA FOR ALL CROPLAN CORN HYBRIDS.

That means you can fine tune management and increase yield potential in the most economically efficient manner.

- There's a 29.5 bu/A average yield response advantage¹ when hybrids are managed according to their Response to Nitrogen (RTN).
- Then, there's a 13.1 bu/A average yield response advantage¹ when hybrids are managed according to their Response to Fungicide (RTF), which not only guides the fungicide decision, but also the application timing.
- Testing and correlating plant populations, RTN and RTF allows us to make sense of the almost infinite interactions between population, nitrogen, fungicide and yield response for each hybrid.

EACH HYBRID IS DIFFERENT, AND THEIR AGRONOMIC REQUIREMENTS ARE, TOO.

Putting every hybrid into the same environment won't maximize your ROI. Instead, give each hybrid what it needs when it needs it. And just as importantly, eliminate actions that don't provide the yield and revenue impact you desire.

Only CROPLAN seed provides this level of intelligence. And you can only find CROPLAN seed hybrids at the best retailers in America.

ZINC SEED TREATMENT IN THE BAG

Zinc is proven to help corn get off to a fast, healthy start and encourage stronger root development. CROPLAN is one of the only seed brands with zinc on every corn hybrid, in every bag, with no overtreatment or upcharge. It's a key component of our proprietary corn seed treatment – Fortivent® Plus. In 2018 Answer Plot® testing, Fortivent Plus showed a +4.7bu/A average advantage over untreated CROPLAN products.

Fortivent® Plus Features and Benefits

- All CROPLAN® hybrids come with Poncho® VOTiVO® seed treatment.
- Provides enhanced Pythium control with ethaboxam fungicide.
- Includes Fortivent Zn for success in early-season growth and root development.
- Includes 100% replant offering on all CROPLAN® hybrids.

When you choose CROPLAN seed, you're gaining an agronomic edge which can help maximize ROI potential.

CROPLAN

CROPLAN® TRAIT LETTERING FOR CORN HYBRIDS

Descriptive hybrid numbering and trait lettering systems are used for CROPLAN® corn hybrids.

KEY	HYBRID	TRAIT	LOGO
SS/RIB	SmartStax® RIB Complete® Corn Blend	Two mode of actions working against corn rootworm for below ground protection. As a RIB Complete® brand corn blend, means refuge compliance for the Corn-Growing Area is easier than ever. Two more sites of action provide tolerance to glyphosate and glufosinate herbicide applications.	
SSPRO/RIB	SmartStax® PRO Complete® Corn Blend	For corn on corn acres, or those with corn rootworm damage, SmartStax® PRO technology contains three different modes of action against corn rootworm. SmartStax® PRO Technology combines the proven benefits of SmartStax® Technology with an additional, unique RNAi-based mode of action — becoming the first product with three modes of action for corn rootworm control. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
VT4P	VT4PRO™ RIB Complete®	For corn on corn acres, or those with corn rootworm damage, VT4PRO™ Technology combines the three built-in modes of action in Trecepta® Technology, an elite above-ground pest package for corn, with two below-ground modes of action to help manage corn rootworm. VT4PRO Technology will provide farmers protection against above-ground pests including European corn borer, southwestern corn borer, fall armyworm, black cutworm, western bean cutworm and corn earworm. VT4PRO contains Roundup Ready 2 Technology® which allows the corn plant to withstand glyphosate treatments. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn- Growing Area is easier than ever. Products available with and without refuge in bag options.	
VT2P/RIB	VT Double PRO® RIB Complete® Corn Blend	For rotated acres with no visible corn rootworm, and low to moderate risk. Dual modes of action for maximum protection against above-ground pests, like European and Southwestern corn borers and fall armyworm. An additional site of action helps plants withstand glyphosate to prevent weeds from competing with corn. As a RIB Complete® brand corn blend, means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
RR	Roundup Ready® Corn 2	Roundup Ready Corn 2 enables consistent field-to-field weed control. Engineered for glyphosate tolerance, this technology allows you to apply Roundup® brand agricultural herbicides and other labeled glyphosate products.	
TRE/RIB	Trecepta® RIB Complete® Corn Blend	For rotated acres with no visible corn rootworm, and low to moderate risk. Trecepta® Technology helps reduce yield loss by protecting your corn crop from a wide range of above-ground pests. Built on the proven VT Double PRO® Technology, Trecepta Technology gives you more complete control against corn borers (European and southwestern), fall armyworm, western bean cutworm, black cutworm and corn earworm. Trecepta contains Roundup Ready 2 Technology® which allows the corn plant to withstand glyphosate treatments. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
DGVT2P/RIB	DroughtGard® VT Double PRO® RIB Complete® Corn Blend	VT Double PRO® RIB Complete® corn blend contains dual modes of action for maximum protection against above-ground pests, like European and Southwestern corn borers and fall armyworm. DroughtGard® Hybrids products are designed to help corn plants resist drought stress and minimize the risk associated with one key, unpredictable factor: The weather. The DroughtGard® Hybrids gene helps the plant create proteins that are essential for growth, helping to support yield opportunity when water is scarce. Plus, it's a RIB Complete® brand corn blend, which means refuge compliance for the Corn-Growing Area is easier than ever. Products available with and without refuge in bag options.	
D	Duracade™	The Duracade™ trait stack provides multiple modes of action against corn rootworm and corn borer, as well as suppression of ear-feeding insects. This trait stack includes a novel, alternate mode of action to help preserve trait durability and delay insect adaptation for long-term field health, and the convenience of an integrated E-Z Refuge® seed blend.	
PCE	PowerCore® Enlist®	Herbicide flexibility with the Enlist® weed control system, which offers tolerance to 2,4-D choline in Enlist® herbicides in addition to glufosinate and glyphosate. Insect control against black cutworm, fall armyworm, European and southwestern corn borers, and corn earworm. Enlist weed control system provides a whole-farm solution across corn, soybean and cotton acres.	

CROPLAN CP3715SSPRO SmartStax PRO

Relative Maturity: 97

- Versatile SmartStax® PRO hybrid for known CRW acres
- Strong stress tolerance and solid agronomics
- Moderate RTN rating; doesn't need aggressive nitrogen management to thrive
- Manage in areas where gray leaf spot is a concern

CROPLAN CP4024SSPRO SmartStax PRO

Relative Maturity: 100

- Versatile hybrid; works well within zone and north of zone
- Strong roots and stalks; wide area of adaptability
- Moderate response to nitrogen and fungicide; great flexibility
- Manage leaf diseases with a fungicide in corn-on-corn situations

CROPLAN CP4652SSPRO SmartStax PRO

Relative Maturity: 106

- Versatile hybrid works well within zone and south of zone
- Excellent top end yield potential hybrid
- Responds favorably to additional nitrogen applications
- Maximize late season staygreen with fungicide application

CROPLAN CP4917SSPRO SmartStax PRO

Relative Maturity: 109

- Exciting new SmartStax® PRO hybrid; works east to west
- Very good agronomics; good greensnap tolerance
- Best if kept in maturity zone; does not move south exceptionally well
- Good Goss's wilt and southern rust tolerance

KEY

SCALE:
 1 = Excellent
 2 = Strong

 4 = Manage
 5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP5320SSPRO**SmartStax[®] PRO**
RIB COMPLETE[™]**NEW**

Relative Maturity: 113

- New key 113 RM SmartStax[®] PRO hybrid; handles marginal-to-highly productive acres, rotated and corn-on-corn
- Strong emergence, stalks and disease package; early vigor with dual purpose silage option
- Semi-flex ear allows for moderate planting populations
- Tall plant type with higher ear placement

CROPLAN CP2585SS**SmartStax[®]**
RIB COMPLETE[™][VT2P/RIB]*
Relative Maturity: 85

- Ideally placed on productive soils
- Strong seedling vigor for planting early
- Moderate response to nitrogen hybrid; good response to aggressive nitrogen management
- Use caution in drought-prone, low productive soils

CROPLAN CP2845SS**SmartStax[®]**
RIB COMPLETE[™][VT2P/RIB]*
Relative Maturity: 89

- High-yield potential product for most soil types and environments
- Earlier flowering date and fast drydown
- High response-to-nitrogen and population optimizes yield potential
- Manage placement for Goss's wilt

CROPLAN CP3399SS**SmartStax[®]**
RIB COMPLETE[™]

Relative Maturity: 94

- Best-positioned in high-yield environments
- Medium-stature hybrid that has strong staygreen
- Optimize yield with enhanced nitrogen management
- Manage for Goss's wilt

KEY**SCALE:**1 = Excellent
2 = Strong

3 = Acceptable

4 = Manage

5 = Not Recommended

CROPLAN[®] corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot[®] trials.

CROPLAN CP3519SS

Relative Maturity: 95

SmartStax
RIB COMPLETE**NEW**

- Versatile SS-hybrid; big yield potential and strong agronomics
- Solid agronomic package; strong emergence, stalks, roots and drought tolerance
- Moderate response to fungicide; versatile placement on both rotated and continuous corn acres
- Acceptable Goss's wilt tolerance; manage in high pressure areas

CROPLAN CP3735SS[VT2P/RIB]*
Relative Maturity: 97**SmartStax**
RIB COMPLETE

- Adaptable east to west; best suited for variable and tough acres
- Excellent test weight and emergence with solid defensive traits
- Plant at moderate to high densities; fungicide application is recommended
- Keep in RM zone

CROPLAN CP4099SS

Relative Maturity: 100

SmartStax
RIB COMPLETE

- Solid product that shows consistency in most soil types with high-yield potential
- Late-flowering hybrid has excellent roots and seedling vigor
- High response to intensive management; can also handle average acres
- Manage in areas with gray leaf spot and northern corn leaf blight

CROPLAN CP4188SS[VT2P/RIB*, CONV]
Relative Maturity: 101**SmartStax**
RIB COMPLETE

- Works east to west with a widely adapted footprint
- Very attractive plant type with solid agronomic package
- Semi-flex ear allows lower densities; responds when population is pushed
- Handles tough, variable and ideal yield environments

KEY**SCALE:**1 = Excellent
2 = Strong

3 = Acceptable

4 = Manage

5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP4246SS

Relative Maturity: 102

SmartStax
RIB COMPLETE**NEW**

- Tough-acre hybrid for the moderate-to-low corn-on-corn acre
- Strong roots, stalks and emergence for the corn-on-corn acres
- Semi-flex ear allows for variable planting populations
- Acceptable GLS and NCLB; manage with a fungicide

CROPLAN CP4676SS

Relative Maturity: 106

SmartStax
RIB COMPLETE

- Versatile hybrid, position and manage for high yield
- Medium-height hybrid with excellent emergence, seedling vigor and test weight
- Position at medium populations and manage nitrogen for high-yield-potential
- Fungicide application recommended in areas prone to gray leaf spot

CROPLAN CP4770SS

Relative Maturity: 107

SmartStax
RIB COMPLETE**NEW**

- Broadly adapted across yield environments; excels on highly productive and silage acres
- Strong test weight and drought tolerance allow for broad placement
- Fortivent® Plus Zinc comes with every bag of corn seed
- Tall plant type with higher ear placement

CROPLAN CP4880SS

Relative Maturity: 108

SmartStax
RIB COMPLETE

- Best performance on high-yield potential; well drained soils
- SmartStax® hybrid with exceptional top end yield potential
- Strong stalks and strong roots
- Acceptable Goss's wilt tolerance

KEY**SCALE:**

1 = Excellent
2 = Strong

3 = Acceptable

4 = Manage

5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP5073SS

[VT2P/RIB]*

Relative Maturity: 110

SmartStax
RIB COMPLETE

- Best performance on medium-to-highly productive acres
- Strong early plant vigor for reduced tillage and early planting
- Nice ear flex for moderate densities; high response-to-nitrogen
- Utilize fungicide to enhance late-season health

CROPLAN CP5115SS

[VT2P/RIB]*

Relative Maturity: 111

SmartStax
RIB COMPLETE

- Best suited for variable to tough acres
- Excellent emergence, seedling vigor and roots
- Semi-flex ear; plant at moderate populations
- Avoid areas with Goss's wilt history

CROPLAN CP5132SS

Relative Maturity: 111

SmartStax
RIB COMPLETE**NEW**

- New 111 SmartStax® hybrid replaces SS products: CP5210, CP5073 and CP5115
- Very good late season standability and intactness with nice grain quality
- Responds well to higher management

CROPLAN CP5210SS

Relative Maturity: 112

SmartStax
RIB COMPLETE

- Versatile hybrid with high-yield potential
- Strong Goss's wilt and disease tolerance; fits for corn-on-corn acres
- Good ear flex; responds to fungicide and nitrogen management
- Acceptable roots and late season intactness

KEY**SCALE:**

1 = Excellent
2 = Strong

3 = Acceptable

4 = Manage

5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP5335SS

[VT2P/RIB]*

Relative Maturity: 113

SmartStax
RIB COMPLETE

- Tremendous consistency across variable yield environments
- Excellent agronomics, including stalks and late-season intactness
- Acceptable ear flex for variable densities; strong plant health for continuous corn
- Goss's wilt rating over 5370; benefits from enhanced nitrogen management

CROPLAN CP5370SS

[VT2P/RIB]*

Relative Maturity: 113

SmartStax
RIB COMPLETE

- Versatile, dual-purpose product; adapted across multiple yield environments
- Excellent stalks, roots and test weight; strong drydown
- Optimize yield potential with enhanced nitrogen management; moderate-to-high plant densities
- Best positioned on rotated acres; ear tip back influenced by genetics

CROPLAN CP6594SS

[VT2P/RIB]*

Relative Maturity: 113

SmartStax
RIB COMPLETE

- Widely adapted east to west; excellent heat tolerance and high-yield-potential
- Solid agronomics; excellent stalks and roots; acceptable Goss's wilt tolerance
- Moderate response-to-nitrogen and population scores
- Take advantage of fast drydown at harvest; keep in 110RM zones

CROPLAN CP5678SS

[VT2P/RIB, RR]*

Relative Maturity: 116

SmartStax
RIB COMPLETE

- Broadly adapted across yield environments; medium flower date offers north to south movement across maturity zones
- Medium-height plant with wide leaves and a girthy semi-flex ear
- Position at medium populations with enhanced nitrogen management for high-yield-potential

KEY**SCALE:**

1 = Excellent
2 = Strong

3 = Acceptable

4 = Manage

5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP2692D

Relative Maturity: 86

Duracade™**Artesian**

- Agrisure Duracade™ Artesian® trait with excellent yield potential; handles variability and multiple soil types
- Medium-tall plant with strong stalks; dual-purpose option
- Low response to population for success at lower plant densities
- Acceptable Goss's wilt tolerance; slower drydown due to girthy cob and tight husk

CROPLAN CP3852TRE

Relative Maturity: 98

Trecepta®**Hybrid Complete**

- Consistent high-yield potential across multiple environments and soil types
- Strong emergence, roots and stalk quality
- Semi-flex ear that allows for a range of populations
- Manage GLS and NCLB with a fungicide in heavy pressure scenarios

CROPLAN CP4516TRE

Relative Maturity: 105

Trecepta®**Hybrid Complete**

- Best performance on medium-to-highly productive acres
- Strong roots, test weight and Goss's wilt tolerance
- High response to intensive management; can handle average acres
- Manage late season intactness with a fungicide application in high yield environments

CROPLAN CP4840TRE

Relative Maturity: 108

Trecepta®**Hybrid Complete****NEW**

- New 108 Trecepta® hybrid; highly versatile
- Very good late season standability and intactness; nice grain quality
- Good ear flex that allows for moderate planting populations
- Acceptable emergence; do not plant first

KEY**SCALE:**

1 = Excellent
2 = Strong

3 = Acceptable

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP5363TRE

Relative Maturity: 113

Trecepta
RIB COMPLETE**NEW**

- High yield potential when placed on medium-to-highly productive acres
- Excellent emergence with strong late season stalks and drought tolerance
- Manage key diseases and late season intactness with fungicide application
- Fungicide is recommended in areas where GLS and southern rust are a concern

CROPLAN CP5682TRE

Relative Maturity: 116

Trecepta
RIB COMPLETE**NEW**

- Broadly adapted across yield environments; excels on highly productive acres
- Strong agronomic package; very good grain quality
- Semi-flex ear allows for variable planting populations

CROPLAN CP5760TRE

Relative Maturity: 117

Trecepta
RIB COMPLETE

- Outstanding performance potential from east to west
- Top end yield potential with good ear flex capabilities
- Versatile placement across soil types at moderate populations
- Fungicide recommended to enhance protection against southern rust

CROPLAN CP5893TRE

Relative Maturity: 118

Trecepta
RIB COMPLETE

- Fits well in the Southern U.S. and Delta region
- Full-season offering with excellent emergence and seedling vigor
- Strong stalks and roots with good late season health
- Strong southern rust tolerance

KEY**SCALE:**

1 = Excellent
2 = Strong

3 = Acceptable

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP2180VT2P *VTDoublePRO*
Relative Maturity: 81

- Position in average-to-high yield potential acres
- Strong vigor, stalks and roots
- Maximize yield potential with moderate-to-high populations
- Flowers early for RM, keep in zone

CROPLAN CP2288VT2P *VTDoublePRO*
Relative Maturity: 82

- Excellent yield stability across all environments; strong stress tolerance
- Excellent root strength with strong stalks
- Responds to enhanced nitrogen management
- Strong Goss's wilt tolerance

CROPLAN CP2315VT2P *VTDoublePRO*
Relative Maturity: 83

- Excellent drought tolerance to move across variable and tough acres
- Solid agronomics with strong defensive characteristics
- Manage with populations and fungicide application
- Flowers early for RM, keep in zone

CROPLAN CP2324VT2P *VTDoublePRO*
Relative Maturity: 83

- New key early 80 RM hybrid; works across yield environments
- Strong seedling vigor for planting early
- Fast die/fast dry type hybrid will drydown fast after maturity
- A bit lighter test weight

KEY

SCALE:
1 = Excellent
2 = Strong
3 = Acceptable
4 = Manage
5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP2790VT2P *VTDoublePRO*
Relative Maturity: 87

- High-yield potential product with strong ear flex and drought tolerance
- Excellent seedling vigor for early planting
- Strong ear flex with a moderate response-to-nitrogen; can fit a broad range of growing conditions
- Manage for late-season stalks and Goss's wilt

CROPLAN CP2851VT2P *VTDoublePRO*
Relative Maturity: 88

- Great option for Red River Valley and East
- Solid stalks, roots, and emergence
- Semi-determinate ear; keep plant densities moderate to high
- Keep on rotated acres

CROPLAN CP2965VT2P *VTDoublePRO*
Relative Maturity: 89

- Consistent performance in variable ground
- Excellent early vigor for early planting
- High response-to-nitrogen; aggressive N fertility helps drive yield potential on productive soils
- Acceptable Goss's wilt tolerance

CROPLAN CP3143VT2P *VTDoublePRO*
Relative Maturity: 91

- High-yield potential for productive soils with good stress tolerance for tougher acres
- Strong early vigor for early planting; strong stalks late into season
- Good ear flex for planting at reduced populations
- Acceptable Goss's wilt tolerance

KEY

SCALE:
1 = Excellent
2 = Strong

5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP3166VT2P *VTDoublePRO*
Relative Maturity: 91

- Well adapted for planting across yield environments and soil types
- Strong early vigor and very good stress tolerance
- Good ear flex at low populations and maintains ear size at high populations
- Acceptable Goss's wilt tolerance

CROPLAN CP3314VT2P *VTDoublePRO*
Relative Maturity: 93

- Tough-acre hybrid for low-yielding environments
- Solid agronomic package
- Flex ear for variable planting populations
- Manage for Goss's wilt

CROPLAN CP3330aVT2P *VTDoublePRO*
Relative Maturity: 93

NEW

- Broadly adapted hybrid with outstanding agronomics and yield potential
- Strong emergence, stalks, roots and drought tolerance
- Low RTN and RTF; flexible and economical to manage
- Strong Goss's wilt tolerance

CROPLAN CP3337VT2P *VTDoublePRO*
[RR]
Relative Maturity: 93

- Solid yield potential with early flowering enables northern movement
- Massive roots for coarse soil types and consistent silking under drought stress
- Moderate response-to-population handles variable plant densities
- Not recommended for acres with Goss's wilt history

KEY

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP3490VT2P *VTDoublePRO*
Relative Maturity: 94

- High-yield potential hybrid with versatility
- Strong drought tolerance allows placement on drier acres
- Excellent emergence allows for early-plant option
- Acceptable drydown

CROPLAN CP3575VT2P *VTDoublePRO*
Relative Maturity: 95

- Excels in moderate-to-high-yield environments; moves across all soil types
- Strong stalk quality and root strength
- Good ear flex for low plant densities, but responds to higher management
- Manage for Goss's wilt

CROPLAN CP3724VT2P *VTDoublePRO*
Relative Maturity: 97

- Versatile hybrid works east to west; strong performance potential
- Great late season agronomics with strong standability
- Responds well to aggressive nitrogen fertility and fungicide application
- Works well in tough, variable or ideal yield environments

CROPLAN CP3790VT2P *VTDoublePRO*
Relative Maturity: 97

- Tall VT2P hybrid; outstanding yield potential
- Strong agronomics across the board
- Moderate response to fungicide rating, may benefit with a fungicide application
- Do not over-populate to help root development

- Consistent and versatile hybrid to cover broad acres
- Excellent emergence and seedling vigor; strong stalks and roots
- Manage populations in high-yield environments
- Tall hybrid with acceptable Anthracnose rating

CROPLAN CP4757VT2P

Relative Maturity: 107

- Best performance potential on medium-to-highly-productive acres
- Strong roots and test weight with high yield potential
- Moderate response to nitrogen and fungicide offers great flexibility
- Best suited for rotated acres

CROPLAN CP4930DGV2P

- Strong western adaptation; good Goss's wilt and strong greensnap tolerance
- Exceptional top end yield potential
- Plant at moderate populations due to semi-flex ear
- Recommend a fungicide application in areas with high disease pressure

KEY**SCALE:**

1 = Excellent
2 = Strong

3 = Acceptable

4 = Manage

5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP4997VT2P *VTDoublePRO*
Relative Maturity: 109

- Moves east to west; broadly adapted to soil types and yield environments
- Tall hybrid with strong stalks, roots and staygreen
- Manage nitrogen and population
- Best-suited for rotated acres; manage accordingly in corn-on-corn situations

CROPLAN CP5208VT2P *VTDoublePRO*
Relative Maturity: 112

- Versatile product that can move east to west across the Corn Belt
- Flexible hybrid that can handle low-end to high-end acres
- Moderate response to fungicide, which can help with late season health

CROPLAN CP5244VT2P *VTDoublePRO*
Relative Maturity: 112

- Versatile hybrid with high-yield potential
- Strong root system and drought tolerance
- Responds to additional fungicide and nitrogen management, but not required
- Manage for greensnap in susceptible areas

CROPLAN CP5340VT2P *VTDoublePRO*
Relative Maturity: 113

- Versatile hybrid with excellent heat tolerance and yield potential
- Medium-short hybrid with strong stalks and solid agronomics
- Position at moderate-to-low populations to maximize girthy flex ear
- Use caution in areas with high risk of greensnap

KEY

SCALE:
1 = Excellent
2 = Strong
3 = Acceptable
4 = Manage
5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and my change as additional data is gathered.

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP5497VT2P *VTDoublePRO*
Relative Maturity: 114

- Widely adapted east to west across multiple soil types and yield levels
- Strong roots and drought tolerance with excellent test weight
- Semi-flex ear and high response-to-population score allow positioning across yield environments
- Manage fields with history of Anthracnose and southern rust

CROPLAN CP5550VT2P *VTDoublePRO*
Relative Maturity: 115

- Position in average-to-high-yield potential acres; dual purpose option
- Solid agronomic and disease package
- Keep plant densities moderate to high
- Acceptable Goss's wilt tolerance

CROPLAN CP5588DGV2P *DroughtGard*
Relative Maturity: 115

- Best performance in the central and eastern Corn Belt
- Top end yield potential with very good stress tolerance
- Excellent dual purpose silage potential
- Use caution in high Physoderma regions

CROPLAN CP5717VT2P *VTDoublePRO*
Relative Maturity: 117

- Delta hybrid versatile enough to perform outside of zone
- Flexible hybrid that can work across a variety of yield environments
- Excellent test weight and flex ear
- Strong agronomics and southern rust tolerance

KEY

CROPLAN® corn silage hybrids that consistently perform for high-quality and high-tonnage in Answer Plot® trials.

CROPLAN CP4839PCE

Relative Maturity: 108

**NEW**

- New PowerCore Enlist that works east to west
- Strong agronomics, drought tolerance and intactness
- Handles tough acres
- Strong Goss's wilt tolerance

CROPLAN CP5329PCE

Relative Maturity: 113

**NEW**

- Broadly adapted east to west across soil types and yield levels
- Strong emergence; very good late-season stalks and plant integrity
- Good ear flex that allows for moderate planting populations
- Fungicide recommended in areas with southern rust concerns

CROPLAN CP184RR

Relative Maturity: 86

- Flint-dent hybrid for cool, northern maturity zones
- Medium-tall, aggressive-growing hybrid; excellent silage potential
- Large flex ear for wide adaptation to most soils and populations tested
- Silage-only product

CROPLAN CP2520RR

Relative Maturity: 86

- Strong stress tolerance on heavy and moderate soil types
- Excellent roots and drought tolerance
- Nice ear flex for lower populations
- Optimum emergence when planted in warm soils

KEY**SCALE:**

- FX = Fixed

5 Flower Date

- L = Late
- M = Medium
- E = Early

6 Staygreen

- Late-season health coming from strong leaf-disease resistance, enhancing hybrid standability.

These ratings reflect trends observed in research trials that change with variations in rainfall, temperature, crop production patterns and other factors. Ratings on new hybrids are based on limited data and may change as more data is collected.

*Follow IRM guidelines and refuge configurations to preserve the benefits and insect protection of these technology crops.

**GDUs published for each product are an estimate and the actual GDUs in a given year/location can vary based upon environmental factors.

DELIVERING HIGH PERFORMING GENETICS IS OUR DECLARATION OF INDEPENDENCE.

DISEASE & INSECT PROTECTION FOR SOYBEANS

Warden® CX II provides broad-spectrum protection against early-season disease and insects to help improve root health, plant vigor and optimize yield potential. Built from the strong foundation of Warden® CX, Warden® CX II seed treatment includes an additional, innovative active ingredient (Vayantis®) for enhanced disease protection.

Warden® CX II Features and Benefits

Contains four fungicides for multiple modes of action against early-season disease:

- Combination of Vayantis® (Picarbutrazox), a novel A.I., and the highest labeled rate of Mefanoxam commercially available for unprecedented control of Pythium and Phytophthora (including metalaxyl-resistant Pythium).
- Sedaxane (Vibrance®) for Rhizoctonia protection.
- Fludioxonil for protection from Fusarium.
- Includes active ingredient in Cruiser® insecticide (Thiamethoxam) with proven Cruiser® Vigor Effect for healthier, robust root system. Cruiser® provides protection against an array of seed- and foliar-feeding insects.
- A convenient premix formulation at a low use rate that allows for easier application and room to add products to your total seed treatment offer.
- Extra colorant and polymer providing a more vivid red color, plus improved flowability and handling at the planter, leading to better stand counts and yield potential.

WHY WINPAK® SOYBEAN VARIETIES?

WinPak®

WinPak® soybeans are a unique combination of two complimentary varieties blended together to maximize yield potential and help reduce risk. They're a unique concept in soybeans, designed to handle field variability across both highly productive and stressed environments to help ensure you can maximize ROI potential across diverse conditions.

EXAMPLE OF HOW A WINPAK VARIETY CAN BE FORMULATED

	VARIETY A SAMPLE	VARIETY B SAMPLE
PLACEMENT	Average to below-average yield environments.	Best-suited to productive acres.
DISEASE PACKAGE	Strong soybean white mold and iron deficiency chlorosis (IDC) tolerance.	Excellent phytophthora root rot and frogeye field tolerance.
AGRONOMICS	<ul style="list-style-type: none">▪ Narrow canopy type▪ Tall height▪ Excellent standability	<ul style="list-style-type: none">▪ Bushy canopy type▪ Medium height▪ Average standability
STRESS TOLERANCE	Excellent stress tolerance.	Strong stress tolerance.

SOYBEAN HERBICIDE TOLERANCE AND WEED CONTROL

Creating a plan for season-long weed management is critical. And it all starts with seed selection. There are several herbicide-tolerant traits available with full commercial approval, which offer great postemergence options.

	GLYPHOSATE	GLUFONSINATE	2,4-D CHOLINE	DICAMBA

- Early CROPLAN® Enlist E3® soybean with improved yield potential and PRR over CP00729E
- A larger plant type allows for movement onto lighter and/or more offensive soils
- Solid disease package for success in heavier soil types
- Manage for acres where soybean white mold is a concern; reduce populations and increase row spacings

CROPLAN CP0124E

Group: 0.1

Height	MT	Characteristics	PRR Tolerance							1
Canopy Type	Int		SDS Tolerance	N/A						
Emergence	1		SWM Tolerance					2		
Standability	1		BSR Tolerance							1
BSR Tolerance	1		Iron Chlorosis					2		

- Significant increase in yield potential for an early Enlist E3® variety with an excellent defensive package
- Larger canopy allows for movement into offensive environments; delivers a solid defensive package for more defensive soil types
- Excellent PRR, BSR and standability; SCN resistance and overall good IDC and SWM
- Larger plant type overall with excellent standability; no need to push populations

--------	----	-----------------	---------------	---

- WinPak® variety consisting of CP3922E and CP3924ES
- Stable WinPak variety with good performance potential across varied soil types and environments
- Excellent emergence and strong standability
- Manage on IDC prone fields

CROPLAN CP4125ES

Group: 4.1

NEW

[illegible]

- Standalone variety with high yield potential and excellent standability
- Best performance on medium to well drained soils
- Excellent FELS tolerance; good PRR and SDS tolerance

CROPLAN CP4324ES

Group: 4.3

Southern Stem Canker	1
Root-Knot Nematode	5

- Standalone variety; light tawny, brown variety that handles stress well
- Broad acre soybean with narrower plant type
- Excellent emergence and very good stress tolerance
- Manage with seed treatment in areas with higher concerns for PRR and SDS

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

These ratings reflect trends observed in research trials that change with variations in rainfall, temperature, crop production patterns and other factors. Ratings on new soybean varieties are based on limited data and may change as more data is collected.

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

These ratings reflect trends observed in research trials that change with variations in rainfall, temperature, crop production patterns and other factors. Ratings on new soybean varieties are based on limited data and may change as more data is collected.

*WinPak® seed components only. Not for sale individually.

CROPLAN

PACKING MORE INNOVATION INTO EACH & EVERY ALFALFA PLANT.

VARIETY SELECTION

FALL DORMANCY (FD) AND WINTERHARDINESS (WH)

- A higher FD number equals higher yield potential. A lower WH number equals more cold tolerance and stand persistence.
- Independent of breeding efforts, lower FD (more dormant) provides a significant increase in fiber digestibility potential.

PEST RESISTANCE

ANTHRACNOSE DISEASE

- A severe stem and crown disease that causes defoliation. Multiple races, including a new race 5, can be present in late season.
- It occurs most often under warm, moist conditions.
- It causes yield loss of up to 25%.
- Susceptible plants have large, sunken oval- to diamond-shaped lesions.
- Lesions can enlarge to girdle or kill plant. Girdled stems can exhibit a shepherd's hook.

APHANOMYCES ROOT ROT DISEASE

- Infects roots causing seedling stunting, reduced nodulation and poor root development.
- Commonly found in soils that are saturated, poorly drained, compacted or have limited water dispersal.
- Visual symptoms can include gray, water-soaked roots, yellowed cotyledons, and stunted growth that can result in limited yield production or stand failure.

POTATO LEAFHOPPER (PLH)

- Small, light-green insect that feeds on alfalfa plants, causing leaf tips to display a V-shaped yellowing.
- Varieties with glandular hairs provide natural nonpreference feeding for PLH.
- Commonly found in the Plains, Midwest and East; most severe in new seedlings and summer regrowth that causes yield reduction.

NEMATODES

- Microscopic roundworms (several identified species) that live in the soil, surface irrigation water, alfalfa roots and crown tissue.
- Can reduce yield and stand life and cause secondary infections from other diseases. Control them by planting a high-resistance alfalfa variety.
- Commonly found throughout most of the West and Plains.

HIGH-SALINITY SOILS

- Greenhouse tests provide baseline indicators of a variety's ability to germinate in high salinity conditions. Salt breeding nurseries provide greater insights to variety selection based on its ability to mitigate high-salinity stress conditions with more predictable performance for on-farm potential.
- Soils vary. Saline: high soluble salts. Sodic: high sodium ion content. Alkaline: soil pH that is higher than optimum (pH > 8.0).
- Commonly found in the western half of the U.S.

APHIDS

- Can be a problem in dry periods; controlled by other predators in cool and/or wet periods.
- The blue aphid is the most damaging in the Southern Plains to the Southwest.

CROPLAN AA ALFALFA

Anthracnose and Aphanomyces root rot both represent a real threat to alfalfa growers. Our AA disease package helps grow a healthy crop even in field conditions susceptible to these pathogens.

Aphanomyces is an aggressive root disease that causes seedling stunting, reduced nodulation and poor root development. Multiple races can be present.

Anthracnose is a severe stem and crown disease that causes defoliation. Multiple races, including a new race 5, can be present in late season.

CROPLAN® varieties with the designation AA in the name include an enhanced multi-pathogen disease package that offers:

- Disease resistance to multiple races of both Aphanomyces root rot and Anthracnose.
- A combination of healthy roots and healthy stems, which can lead to higher alfalfa yield and forage quality potential.
- Extensive alfalfa roots, to help gather water and nutrients below ground.
- Improved crown and stem health, serving as a highway to transport plant energy to and from the roots and leaves to make valuable forage above ground.

IN-SEASON MANAGEMENT

NEW SEEDING AND STAND ESTABLISHMENT

- Plant into a firm seedbed to control seed depth; seed-to-soil contact is crucial.
- Planting rates do not need to be adjusted for coated seed since bulk density is higher.
- The planting rate for alfalfa varies from region to region, but generally 18 to 20 lbs. per acre is recommended with a goal of about 25 plants per square foot at the end of the seeding year.

ESTABLISHED STANDS: READING THE STAND

- Each spring, determine potential winter damage or winterkill.
- Follow the Reading the Stand program to evaluate the alfalfa stand density and crown health of each field to determine current and future yield potential.

WEED CONTROL

- Control weeds early for a high-producing pure alfalfa stand. Roundup Ready® Alfalfa provides farmers with more flexible management strategies.

INSECT AND DISEASE CONTROL

- Control insects such as aphids (spotted, blue, pea, cowpea), alfalfa weevils and leafhoppers.
- Manage foliar leaf diseases and anthracnose.
- Choose alfalfa varieties with built-in resistance and use a spray application to control as necessary.

NUTRIENT MANAGEMENT

- Alfalfa requires a neutral soil pH (6.8 to 7.2) for high production. Take soil and plant tissue tests to monitor macronutrients and micronutrients.
- A healthy alfalfa plant will have a luxury supply of potassium, boron, sulfur and phosphorus.

HARVEST MANAGEMENT

- Manage leaf loss in-season with fungicide application and during harvest from over-handling during raking, merging, chopping or baling. New Leaf Percentage Test available to estimate leaf content in your alfalfa. See your CROPLAN® alfalfa dealer for more information.
- Wheel traffic can increase soil compaction and crown damage, leading to reduced crop regrowth and yield loss.

THE TRAITS YOU NEED

HARVXTRA® ALFALFA WITH ROUNDUP READY® TECHNOLOGY

This is the alfalfa trait package you've been looking for with plenty of options, including:

- Flexibility: a cutting window you get to control. Harvest at 28 days, or delay if weather slows you down without compromising quality potential.
- Quality: higher RFQ¹ and NDFd¹ than conventional varieties cut on the same day.
- Yield Potential: lengthen your cutting window up to 10 days with up to 20% higher yield at harvest.²
- Plus the benefits of Roundup Ready® Alfalfa technology.

ROUNDUP READY® ALFALFA

- Offers application flexibility for better weed control during stand establishment.
- Can lead to higher yield potential over the life of the stand.
- Can achieve the high-quality hay and haylage potential you need.

CONVENTIONAL ALFALFA

- Conventional breeding techniques that provide strong advancements in yield production, stand persistence, plus insect and disease resistance.
- Three decades of breeding techniques by alfalfa breeders for improved fiber digestibility (e.g., LegenDairy and RR Presteez lines).
 - These varieties have shown an incremental improvement in fiber digestibility when compared to non-selected varieties.

ALFALFA FOR ORGANIC FORAGE PRODUCTION

- Products developed through conventional breeding, as opposed to the result of genetic engineering.*
- These conventional varieties include the Apex™ Green OMRI Listed® seed coating package.
 - Optimizes water absorption by using natural micronutrients and nitrogen-fixing rhizobia in an organic hydration coating.

IMPROVE SEEDLING EFFICIENCY WITH COATED SEED

- Provides an ideal microenvironment with better imbibition (water uptake) and germination.
- Keeps treatments/inoculants close to or bound to the seed for more complete coverage.
- Increases vigor under disease pressure.

SEED COATING

Ensure you're enabling seedling health and seedling germination with WinField® United's seed treatment and coating Grozone® Force package, which delivers:

- Rhizobium bacteria to fix nitrogen
- Fungicides for multiple modes of action to help protect seedlings from root diseases such as phytophthora, Pythium and Aphanomyces
- A micronutrient package to promote early seedling growth

1. Data from FGI trials comparing HarvXtra® Alfalfa with Roundup Ready® Technology 2017 FD4 commercial varieties to FD4 commercial checks. Trials were seeded in 2013 and harvested 2014-2016 at five locations across the U.S. Yield increase is directly correlated to the ability to delay harvest.

2. Data from an FGI trial in West Salem, Wis., comparing three cuttings at 35-day intervals to four cuttings at 28-day intervals. Trials were seeded in 2013 and harvested in 2014-2016. Yield increase is directly correlated to the ability to delay harvest.

**WinField® United does not guarantee forage harvested from stands established with this seed will be GMO-free. Check with your local organic certifying organization before planting.*

The CROPLAN AA disease package was developed by FGI and is also marketed under the UltraCut™ alfalfa disease package brand.

CROPLAN

BRING THE POWER OF PROOF TO YOUR FARM.

Check out the results below. They're proof that bringing high-end genetics with the latest traits and an unbiased focus on product development can deliver big yield potential. Make sure these high performers are a part of your final lineup this season.

- Best-suited for Northern regions; exceptional winterhardiness and stand persistence
- Withstands hoof or wheel traffic; weed control with the Roundup Ready® trait improves stand establishment on dryland acres or in limited water conditions
- Excellent variety where 1 or 2 cuttings of hay will be harvested mechanically, followed by grazing

CROPLAN RR Presteez 2.0

Regions: Central|East|North|West

- Performs well in the Upper Midwest and East where high resistance to potato leafhopper (PLH) may be necessary
- PLH resistance provides improved yield potential, high-quality feed and stand persistence
- Outstanding agronomics; PLH resistance offers reduced-spray or no-spray options; best-suited in a 3- to 4-cut system

ALFALFA VARIETY PLACEMENT¹

The map can be used to determine which alfalfa varieties are recommended for your area's climate challenges. Also, use the chart below to place the recommended variety to help manage common diseases and pests in your area, and to match quality to your desired cutting frequency.

PRODUCT DORMANCY MAP²

Fall dormancy and winterhardness are important considerations in alfalfa seed selection. This map shows CROPLAN® seed varieties that match fall dormancy and winterhardness zones in various regions of the United States.

1. This chart is provided as an illustration only. Planting decisions are complex and any implementation of the placement described above is your decision. Because of factors outside of our control, such as weather and product application, results to be obtained, including but not limited to yields, cannot be predicted or guaranteed by WinField United.

2. Fall dormancy (FD) and winterhardness (WH): Higher FD number = higher yield potential; lower WH number = more cold tolerant and stand persistent.

 5 = Not Recommended

1 Feed Quality Index

Feed quality ratings for HarvXtra® Alfalfa are represented on a separate scale than Roundup Ready® and conventional alfalfa varieties and are signified with an "H." Because there is a significant improvement in forage quality, HarvXtra® Alfalfa products can only be compared to other HarvXtra® Alfalfa products.

2 Salt Tolerance

G = Variety tolerance for germination under high saline conditions in a petri dish
F = Variety tolerance for forage growth under high saline conditions as a potted plant in the greenhouse

Resistance Ratings

S = Susceptible (0–5%)
LR = Low Resistance (6–14%)
MR = Moderate Resistance (15–30%)
R = Resistance (31–51%)
HR = High Resistance (>50%)
HR+ = Highest Resistance available on the market (>50%)

Note: Field tests are currently being used to select and validate true salt-tolerant varieties. Many soils that are high in salinity also have other problematic conditions. Therefore, germination and forage salt-tolerant ratings may not predict field performance.

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

THE PROOF MAY BE IN THE DATA, BUT IT'S ALSO IN THE YIELDS.

SELECT HYBRIDS FOR QUALITY AND TONNAGE

When selecting a corn silage hybrid, two considerations should rise to the top: quality to achieve milk/ton and tonnage for yield. In replicated Answer Plot® trials, we test CROPLAN® corn silage hybrids for both nutrient requirements and agronomic factors.

Look for the CROPLAN hybrids with the Data Proven icon. It represents the designation of high quality and high tonnage, consistently performing to deliver high quality and high tonnage potential.

Your nutritionist can determine the parameters for nutrient needs, and your WinField United representative can use Answer Plot® data to help position each hybrid for optimal performance based on multiple variables.

WHEN PERFORMANCE IS ON THE LINE, THINK SILAGEFIRST® HYBRIDS

CROPLAN seed has three types of hybrids, specifically designed for high-producing dairy and beef cattle:

LEAFY HYBRIDS

- Leafy stalks are thicker and more digestible, with larger ears to produce more energy.

FLOURY-LEAFY HYBRIDS

- At feed out, these products effectively bridge the gap between the previous year's corn silage pile and the current year's feed.
- May not contain a high level of total starch but have a softer kernel texture that's easily broken during the chopping, storage and chewing process, allowing starch to be readily digested for more available energy.

HIGH-ENERGY/HIGH-TONNAGE HYBRIDS

- More flexibility in harvest and feed out as grain or high-energy/high-tonnage silage when used in combination with leafy and floury-leafy hybrids.
- Appropriate for feeding after the 120-day post-ensiling period when reaching optimum starch and fiber digestibility.

THE PROOF MAY BE IN THE DATA, BUT IT'S ALSO IN THE YIELDS.

SELECT HYBRIDS FOR QUALITY AND TONNAGE

When selecting a corn silage hybrid, two considerations should rise to the top: quality to achieve milk/ton and tonnage for yield. In replicated Answer Plot® trials, we test CROPLAN® corn silage hybrids for both nutrient requirements and agronomic factors.

Look for the CROPLAN hybrids with the Data Proven icon. It represents the designation of high quality and high tonnage, consistently performing to deliver high quality and high tonnage potential.

Your nutritionist can determine the parameters for nutrient needs, and your WinField United representative can use Answer Plot® data to help position each hybrid for optimal performance based on multiple variables.

WHEN PERFORMANCE IS ON THE LINE, THINK SILAGEFIRST® HYBRIDS

CROPLAN seed has three types of hybrids, specifically designed for high-producing dairy and beef cattle:

LEAFY HYBRIDS

- Leafy stalks are thicker and more digestible, with larger ears to produce more energy.

FLOURY-LEAFY HYBRIDS

- At feed out, these products effectively bridge the gap between the previous year's corn silage pile and the current year's feed.
- May not contain a high level of total starch but have a softer kernel texture that's easily broken during the chopping, storage and chewing process, allowing starch to be readily digested for more available energy.

HIGH-ENERGY/HIGH-TONNAGE HYBRIDS

- More flexibility in harvest and feed out as grain or high-energy/high-tonnage silage when used in combination with leafy and floury-leafy hybrids.
- Appropriate for feeding after the 120-day post-ensiling period when reaching optimum starch and fiber digestibility.

CROPLAN CP3715SSPRO SmartStax PRO

Relative Maturity: 97

- Versatile SmartStax® PRO hybrid for known CRW acres
- Strong stress tolerance and solid agronomics
- Moderate RTN score; doesn't need aggressive N management to thrive
- Manage in areas where gray leaf spot is a concern

CROPLAN CP4024SSPRO SmartStax PRO

Relative Maturity: 100

- Strong SmartStax® PRO hybrid for heavy CRW acres
- Solid agronomic and disease package
- Versatile hybrid that moves north well
- Acceptable Goss's wilt tolerance

CROPLAN CP4652SSPRO SmartStax PRO

Relative Maturity: 106

- Excellent tonnage and quality potential with SmartStax® PRO trait for continuous corn acres
- Excellent top end yield potential
- Responds favorably to additional nitrogen applications
- Maximize late season staygreen with fungicide application

CROPLAN CP4917SSPRO SmartStax PRO

Relative Maturity: 109

- Tall SmartStax® PRO hybrid; outstanding tonnage potential
- Strong agronomic package; complements yield potential
- Best performance in zone and north
- Avoid fields with prolonged saturated soils

CROPLAN

**FORAGE
SORGHUM**

THIS SORGHUM CROP IS IN IT TO WIN IT ALL SEASON LONG.

SELECT THE RIGHT FORAGE TYPE FOR YOUR OPERATION

► Forage Sorghum (single-cut silage)

Tall plant that has a sweet stalk and small grain head with limited regrowth potential.

► Sorghum x Sudan (multi-cut or grazing)

Strong tillering and regrowth ability, ideal for multiple harvests with increased tonnage potential.

► Pearl Millet (multi-cut or grazing)

Brachytic plant stature with finer stalks, very leafy, stress tolerant, and prolific tillering.

SELECT THE HYBRID WITH THE TRAIT YOU NEED

BROWN MIDRIB-6 TRAIT

- Excellent forage quality and agronomics.
- Nutritional value potential is comparable to corn silage.
- Trait available in the following forage types: forage sorghum, sorghum x sudan, pearl millet.

BRACHYTIC TRAIT

- Excellent standability and tillering.
- Shorter stature and high leaf-to-stem ratio due to reduced internode length.
- Trait available in the following forage types: forage sorghum, sorghum x sudan, pearl millet.

PHOTOPERIOD SENSITIVITY TRAIT

- Extended harvest window.
- Remains vegetative until day length falls below 12 hours and 20 minutes, then entering reproductive stage.
- Trait available in the following forage types: forage sorghum, sorghum x sudan.

SUGARCANE APHID (SCA)

- Use a tolerant hybrid to slow down the rate of infestation and seed treatment for early control.
- Plant as early as soil temperature allows. An earlier-maturity variety may help avoid late-season infestations.
- Scout early and often, while treating as soon as threshold is reached.
- Avoid use of pyrethroids and other insecticides that are harmful to beneficials (SCA natural enemies include lady beetles, hover fly and green lacewing). Insecticides may cause SCA numbers to increase rapidly.

HERBICIDE TOLERANCE

- igrowth® and DT™ Trait herbicide tolerant hybrids are now available to help protect against hard to control grass and broadleaf weeds.

CROPLAN

CROPLAN BMR 3211

Regions: Central|East|North|Double-crop

Maturity: Early

Characteristics

Stress Tolerance	3				
Disease Tolerance	2				
Forage Quality				1	
Dry Hay	4				
Silage				1	
Grazing	4				

- Early-maturing hybrid; slightly better forage quality than 3212
- BMR-6 trait with excellent forage quality potential; great for lactating cows
- Strong disease resistance; moves well north and east; excellent double-cropping option in Central Plains
- Avoid overwatering and excessive populations; plants can reach 8 feet
- Recommended seeding rate: 60-70K seeds per acre; 1-1 1/2 in. deep, depending on soil moisture

NEW

CROPLAN BMR 3212

Regions: Central|East|North|Double-crop

Maturity: Early

Characteristics

Stress Tolerance	3				
Disease Tolerance	2				
Forage Quality				1	
Dry Hay	4				
Silage				1	
Grazing	4				

- Early-maturing hybrid; excellent yield potential; potentially better standability over 3211
- BMR-6 trait with excellent forage quality potential; great for lactating cows
- Strong disease resistance; moves well north and east; excellent double-cropping option in Central Plains
- Avoid overwatering and excessive populations; plants can reach 8 feet
- Recommended seeding rate: 60-70K seeds per acre; 1-1 1/2 in. deep, depending on soil moisture

CROPLAN 3506

Regions: Central|South|West

Maturity: Mid

Characteristics

Stress Tolerance	2				
Disease Tolerance				1	
Forage Quality			2		
Dry Hay	5				
Silage				1	
Grazing	5				

- Position where you will be needing systemic insecticide for early control of insects
- Extremely flexible hybrid; excellent disease and drought tolerance; placement across most of the U.S.
- Excellent yield potential; similar to a late-season hybrid; better on irrigation than 3501
- Excellent standability; plants can reach 7-8 feet; manage water and fertility for a mid-maturity hybrid
- Recommended seeding rate: 50-60K seeds per acre at 1-1 1/2 in. deep, depending on soil moisture

CROPLAN 3541 BMR Leafy AT

Regions: Central|South|West

Maturity: Mid

Characteristics

Stress Tolerance	2				
Disease Tolerance				1	
Forage Quality				1	
Dry Hay	5				
Silage				1	
Grazing	5				

- Excellent forage quality of the BMR-6 gene paired with the brachytic dwarf trait for high leaf-to-stem ratio
- Extremely flexible hybrid; excellent disease and drought tolerance allow for placement across most of the U.S.
- Sugarcane aphid tolerance offers in-plant crop protection for areas that experience this pest regularly
- Combining the brachytic dwarf traits with excellent stalks, standability is excellent with a 6 to 7 foot plant height
- Recommended seeding rate: 60,000 to 100,000 seeds per acre at 1 to 1 1/2 inches deep, depending on soil moisture

DTTM TRAIT

NEW

Regions: Central East North South West					
Maturity: Mid					
Characteristics	Stress Tolerance			2	
	Disease Tolerance			2	
	Forage Quality	N/A			
	Dry Hay		4		
	Silage				1
	Grazing		4		

- DT™ trait for in-season control of grassy weeds in herbicide tolerant sorghum
- Very good yield potential; good quality from very leafy, dense canopy
- Highly versatile placement across growing regions with great stress tolerance
- Recommended seeding rate: 60-80K seeds per acre at 1-1 1/2 in. deep, depending on soil moisture

CROPLAN IQ 3501

Regions: Central South West	Stress Tolerance	Disease Tolerance	Forage Quality	Dry Hay	Silage	Grazing
Maturity: Mid	2	1	2	5	1	5

- IQ (improved quality) series has higher forage quality potential than conventional hybrids
- Extremely flexible hybrid; excellent disease and drought tolerance; placement across most of the U.S.
- Excellent yield potential; similar to a late-season hybrid; better on toughest dryland than 3506
- Excellent standability; plants can reach 7-8 feet; manage water and fertility for a mid-maturity hybrid
- Recommended seeding rate: 50-60K seeds per acre at 1-1 1/2 in. deep, depending on soil moisture

CROPLAN 3681 AT

Regions: Central South West	Maturity: Mid/Late	Characteristics	Stress Tolerance	Disease Tolerance	Forage Quality	Dry Hay	Silage	Grazing
			2	1	3	5	1	5

- Conventional hybrid with excellent tolerance to sugarcane aphid (SCA), which may be on plant in low numbers
- Extremely flexible hybrid; excellent disease and drought tolerance allow for placement across Central and Southern U.S.
- Very high leaf expression and great stalks; good yield potential; handles stress well
- Excellent standability; plants can reach 8-9 feet; manage water and fertility for a mid-maturity hybrid
- Recommended seeding rate: 60-70K seeds per acre; 1-1 1/2 in. deep, depending on soil moisture

CROPLAN 3731 BMR Leafy

Regions:	Central	South	West
Maturity:	Late		

Characteristics	Central	South	West
Stress Tolerance	2		
Disease Tolerance	1		
Forage Quality	1		
Dry Hay	5		
Silage	1		
Grazing	5		

- Excellent forage quality of the BMR-6 gene paired with the brachytic dwarf trait for high leaf-to-stem ratio
- Extremely flexible hybrid; excellent disease and drought tolerance; placement across most of the U.S.
- Late maturity variety with excellent combination of yield potential and quality requiring a full growing season
- Combines the brachytic dwarf traits with excellent stalks; excellent standability with a 6-7 foot height
- Recommended seeding rate: 60-100K seeds per acre at 1-1 1/2 in. deep, depending on soil moisture

Silage	<div><div></div><div></div><div></div><div></div><div></div></div>	3
Grazing	<div><div></div><div></div><div></div><div></div><div></div></div>	1

- Excellent forage quality of the BMR-6 gene paired with the brachytic dwarf trait; lower cutting height and high leaf-to-stem ratio
- Excellent variety for drought tolerance and heat stress; strong disease package for humid areas and anthracnose risk
- Dry stalk (~5% less) paired with fine stems allows for easier transition into dry hay use
- Forage quality may be compromised without proper harvest management (40 days or 40 in.); harvest prior to 50 days before head is initiated
- Recommended seeding rate: 20-25 lbs. per acre at 1 in. (by drill)

CROPLAN Honey Sweet AT

Silage	<div><div></div><div></div><div></div><div></div><div></div></div>	3
Grazing	<div><div></div><div></div><div></div><div></div><div></div></div>	1

- Brachytic dwarf BMR-6 gene for excellent efficiency, SCA tolerant, Photoperiod Sensitive, Male Sterile
- Photoperiod sensitive trait allows the plant to remain in the vegetative state with a minimum of 12 hours and 20 minutes of daily sunlight; then head formation starts
- Male Sterile trait also aids in capturing sugars in the plant as it will not produce viable seed as it does try to head at end of the season
- Harvest at 40 days or 40 inches, whichever comes first; for grazing, start when plants reach 18 to 24 inches, remove animals when two nodes are left aboveground
- Recommended seeding rate: 20 to 25 pounds per acre at a depth of 1 inch (by drill is recommended)

CROPLAN PM 4507 PM

- Leafy, compact structure; the BMR-6 gene provides superior forage digestibility
- Extremely uniform in maturing height; high yield potential and quick drydown; ideal for baled hay
- Resistant to sugarcane aphid; good disease tolerance; well-adapted for use in all growing areas
- Great for horses as dry hay or grazing; no prussic acid; harvest at 40 days or 40 in.
- Recommended seeding rate: 10-15 lbs. per acre at a depth of 3/4 in. (by drill)

CROPLAN

**GRAIN
SORGHUM**

WE'RE BIG ON GENETICS THAT ARE BIG ON HIGH PERFORMANCE & YIELDS.

SELECT THE HYBRID WITH THE TRAIT YOU NEED

CROPLAN® grain sorghum products offer traits that have made great progress in protecting plants from insect damage and reducing competition from weeds.

SUGARCANE APHID TOLERANCE (SCA)

- Use a tolerant hybrid to slow down the rate of infestation. Plant as early as soil temperature allows. And while many commercially available products have high levels of sugarcane aphid tolerance, an earlier-maturity variety may help avoid late-season infestation in areas of high concern.
- Scout early and often. And use approved Sugarcane Aphid approved insecticide as soon as threshold is reached.
- Insecticides may cause SCA numbers to increase rapidly. Make sure to avoid using pyrethroids and other insecticides that are harmful to beneficials (SCA natural enemies include lady beetles, hover fly and green lacewing).

POST EMERGENT APPLICATION

Multiple product options are accessible for over-the-top application for weed control. For example, igrowth® and DT Trait™ herbicide tolerant hybrids are now available for use for over-the-top application of IMIFLEX® and FirstAct® Herbicide, respectively, for select grass and broadleaf weed control.

Root Strength	<div><div></div><div></div><div></div><div></div><div></div></div>	1

- Good potential for stressed acres in the High Plains
- Very good at handling stress loads prior to flowering to maintain yield potential
- Stable performance potential in low yield environments with good potential on higher yielding soils with water and management
- Tough, grower friendly dryland product for the Western Plains (SD, central/western NE, central/western KS, eastern CO)
- Medium plant height to help standability; semi-open head to assist in grain dry down

CROPLAN CP5921A

Adaptation: SD, NE, KS, CO, OK, TX

Seedling Vigor	■	■	■	■	3
Test Weight	■	■	■	■	2
Stalk Strength	■	■	■	■	1
Root Strength	■	■	■	■	1

- Excellent drought tolerance to handle pre-and post-flower stresses on tough dryland acres in the Western Pains
- Moderate plant height with great stalk and root strength
- Manage appropriately in areas, where there's a history of or heavy Anthracnose pressure
- Well suited for no-till and dryland acres where an early harvest is desired
- Early maturing variety with consistent yield potential product on tough acres with limited rainfall - western So. Dak., Neb., Kan. and eastern Col.

CROPLAN CP6021A

Adaptation: SD, NE, KS, CO, OK, TX

**SPRING
CANOLA**

THE RIGHT GENETICS & THE RIGHT TRAITS FOR THE RIGHT YIELD POTENTIAL.

THE RIGHT GENETICS AND TRAITS FOR YOUR ACRES

- CROPLAN® seed brings genetic diversity to the farm with the latest weed-control options such as the LibertyLink® canola system and TruFlex® canola, which offers outstanding crop safety.

LUMIDERM® INSECTICIDE SEED TREATMENT

An industry leading technology responsible for:

- Improved control of flea beetle and cutworm.
- Providing crops with increased stand establishment, plant vigor and biomass.

SC designates these products have met the minimum requirements for standability and reduced shatter to be considered a straight-cut hybrid.

SC+ indicates a hybrid has met the highest level of requirements for optimum straight-cut performance.

CROPLAN SEED DELIVERS EXCELLENT SHATTER SCORE¹

- CROPLAN® TruFlex® canola (CP9978TF) showed a lower shatter score than competitive checks in a recent study from Roseau, MN.

% OF LOSS TO SHATTER

Variety Trial.

Northern Resources, Roseau, Minn.

1. Results not statistically significant and may vary. Because of factors outside of WinField United's control, such as weather, product application and any other factors, results to be obtained, including but not limited to yields, financial performance or profits, cannot be predicted or guaranteed by WinField United.

CROPLAN

CROPLAN CP930RR
Spring Canola

Characteristics	
Straight Cutting	3
Oil Content	1
Drought Tolerance	1
Lodging	1

- Industry-leading oil content
- Excellent yield potential for early maturity; strong stress tolerance
- Good for straight-cutting; good shatter scores
- Strong vigor; for less-than-ideal seedbeds and no-till

CROPLAN CP9221TF
Spring Canola

Characteristics	
Straight Cutting	2
Oil Content	2
Drought Tolerance	1
Lodging	1

- Strong yield with excellent stress tolerance
- Very good shatter scores and standability
- Early maturity helps manage workload in timely straight-cut systems
- Strong disease package with resistance to both clubroot and blackleg

CROPLAN CP9978TF
Spring Canola

Characteristics	
Straight Cutting	1
Oil Content	2
Drought Tolerance	2
Lodging	1

- Excellent for straight-cutting with some of the industry's leading shatter/pod drop tolerance
- Highest yield potential in cooler, higher yielding environments; responds well to higher populations
- Excellent vigor for heavy trash, cold soils or no-till
- LepR3, RlmS provide enhanced blackleg resistance

CROPLAN CP7130LL
Spring Canola

Characteristics	
Straight Cutting	3
Oil Content	3
Drought Tolerance	2
Lodging	2

- High yield potential hybrid in cooler and moderate- to higher-yielding environments
- Great early season vigor
- Low RTN score increases stability across acres; helps in lower nitrogen soils or under lower nitrogen management systems
- Brings sclerotinia, clubroot and blackleg resistance

CROPLAN

**WINTER
CANOLA**

HIGH PERFORMING PRODUCTS BRINGING OUT THE BEST IN YOUR FIELDS.

USE CUTTING-EDGE WEED CONTROL

CROPLAN® seed offers the latest herbicide management systems with excellent crop safety ratings to give your canola a clean chance at success.

ROUNDUP READY® WINTER CANOLA

- Strong on cheat, feral rye and other tough grasses.
- Optimal control with Class Act® NG® and InterLock® adjuvants.
- Excellent crop safety with Roundup® brand agricultural herbicide for in-crop applications.

ROUNDUP READY® WINTER CANOLA WITH SURT

- Review the crop protection history of previous wheat crops.
- Improved crop safety from previous wheat crops with a long-residual sulfonyleurea herbicide.
- Susceptibility to many broadleaf herbicides with a long residual life.

CANOLA ROTATION RESTRICTIONS? WE HAVE YOU COVERED.

Group 2 Flexible (G2Flex®) residual tolerance technology allows canola to be planted right behind wheat in soils with Group 2 herbicide residuals, including imidazolinones, sulfonyleureas, sulfonamides and triazolopyrimidines.

WinField® United is the exclusive provider of the only canola variety with the G2Flex trait — CROPLAN® CP1022WC winter canola.

G2FLEX

PLANTING FOR WINTERHARDINESS

- Canola should be planted six weeks before the first killing frost date for the area (less than 25° F).
- Seeding date is important to establishing a crop that has sufficient growth for good winterhardiness.
- Planting into a clean seedbed free of crop residue allows for better winterhardiness.
- Crop residue can elevate plant crowns and expose them to more temperature fluctuations and winterkill.

SUNFLOWER

OUR TESTING NEVER STOPS, AND YOUR YIELDS NEVER SHOULD EITHER.

FORTENZA® INSECTICIDE SEED TREATMENT

An industry leading technology, that's been added to our seed treatment offering is responsible for:

- Improved control of cutworm.
- Providing crops with increased stand establishment, plant vigor and biomass.

PROSUN® PRECISE SEED COATING

Prosun® precise seed coating is available on select CROPLAN® sunflower hybrids and offers:

- Consistent seed size, which helps optimize yield potential.
- Uniformity in stand establishment.
- Even growth for optimal weed, disease and insect management.

TRAIT OPTIONS FOR THE WEED CONTROL YOU NEED

We offer farmers the ExpressSun® and the Clearfield® Production System traits, both of which provide good weed-control options to farmers.

BEYOND® AND EXPRESS® HERBICIDES

- Require preemergence herbicide treatments (Spartan® Charge, BroadAxe® or Prowl® H2O) or preplant-incorporated herbicides (Framework®, Prowl® H2O or Sonalan®) to combat kochia and Russian thistle.
- Group 2 herbicide mode of action: ExpressSun® trait is tolerant to Express® herbicide and Clearfield® Production System is tolerant to Beyond® herbicide.

BRING THE POWER OF PROOF TO YOUR FARM

At our Answer Plot Innovation Farm, we're able to test more products than ever. In fact, we're increasing our ability to test each hybrid's response to nitrogen, fungicide and population to better our understanding of management for every product in our brand. By taking it down to a more granular level with foliar micronutrients, in-furrow biologicals, insecticides and fungicides, it allows us to evaluate new novel seed treatments to help make the stand get up faster and stronger.

Check out the Answer Plot® results below. They're proof that bringing high-end genetics with the latest traits and an unbiased focus on product development can deliver big yield potential.

Stalk Quality					1
Root Strength					1
Phomopsis				2	
Oil Content					
Dry down				2	

- Excellent yield potential; great defensive complement to CP455E
- Top performer in stressed environments
- Stronger standability than CP455E; good hybrid to plant early
- Good drought stress tolerance and low demand for additional nitrogen to maintain yield potential

CROPLAN CP4157E
ExpressSun® Sunflower

ExpressSun
trait

Stalk Quality				2	
Root Strength		4			
Phomopsis					1
Oil Content			3		
Dry down				2	

- High yield potential product with great offensive ability; excellent stress tolerance
- Taller plant; good standability.
- Low response to nitrogen; consistent yield potential across environments
- Keep populations average or even reduce; positive impact on standability without yield loss.

CROPLAN CP4490E
ExpressSun® Sunflower

CROPLAN CP5220CLSS

Clearfield® Sunflower

- Very early, extremely short-statured hybrid
- Excellent stalks, roots and late season standability
- Ultra-early hybrid with DMR for the high oleic crush/birdseed market
- Excellent option for late-planting or double-crop acres with in-season ground applications possible

NEW**CROPLAN CP5242CL**

Clearfield® Sunflower

- High oleic hybrid with excellent oil and very good yield potential for maturity
- Great standability in the field with consistent performance across environments
- Excellent roots and stalks, very good heat and drought tolerance
- Solid performance on lighter soils

CROPLAN CP5249CL

Clearfield® Sunflower

**NEW**

- High oleic hybrid with excellent oil; very good yield potential for maturity
- Great standability in the field; consistent performance across environments
- Excellent roots and stalks; very good heat and drought tolerance
- Solid performance on lighter soils

CROPLAN CP5045CL

Clearfield® Sunflower

- Very high yield potential with excellent agronomics
- PI 6 and PI 17 DMR for one of the industry's leading downy mildew tolerance
- Excellent stalks and roots; medium plant height for excellent late-season standability
- Increased staygreen and slower drydown in cooler environments; good candidate for desiccation

1 Market Options

Grain not guaranteed to be sold in your area.

Due to factors outside our control, WinField United does not guarantee oleic levels.

TBD = still in testing.

2 Downy Mildew Resistance

PI 2 gene = This gene is resistant to some of the early races of downy mildew, but it is susceptible to most of the common races found today.

PI 6 gene = This gene is resistant to races prevalent before 2009; it is susceptible to races 314, 704, 714, 734 and 774.

PI 8 gene = This gene can get infected, but then stops downy mildew from advancing or having an economic impact on all common races.

PI 15 gene = This gene is exclusive to CROPLAN® hybrids and is resistant to all known races of downy mildew.

PI P gene = Proprietary gene developed to control all known races of downy mildew.

PI 17 gene = Advanced control, resistant to all known races of downy mildew.

M9 gene = Broad spectrum resistance to races: 100, 304, 307, 314, 334, 703, 704, 710 and 714.

M = Moderate Response
H = High Response

CROPLAN

HARD RED SPRING WHEAT

THIS IS NEXT-LEVEL R&D, HELPING YOU OPTIMIZE PROFIT POTENTIAL.

Optimize Seed ROI

To achieve farm topping yield potential, you need to do many things right. And that starts with CROPLAN® varieties.

This is seed that puts you on the path to maximizing ROI potential on each acre, beginning with exceptionally high performing genetics, which bring agronomic characteristics important in maximizing yield potential. But even bigger advantages come with the data and intelligence we build on top of these revolutionary wheat varieties.

ANSWER PLOT® RESEARCH PROVIDES RESPONSE DATA FOR CROPLAN WHEAT VARIETIES.

That means you can fine tune management and increase yield potential in the most economically efficient manner.

- There's a 25.5 bu/A average yield response advantage¹ when varieties are managed according to their Response to Nitrogen (RTN).
- Then, there's a 10.9 bu/A average yield response advantage¹ when varieties are managed according to their Response to Population (RTP).
- We are currently evaluating the new Response to Sulfur yield response and initial data is promising. Stay tuned; year two of research should give us the confidence needed to create ratings and management recommendations.

EACH VARIETY IS DIFFERENT, AND THEIR AGRONOMIC REQUIREMENTS ARE, TOO.

Putting every product into the same environment won't maximize your ROI. Instead, give each variety what it needs when it needs it. And just as importantly, eliminate actions that don't provide the yield and revenue impact you desire.

Our Answer Plot Innovation Farm allows us to test more products and management techniques than ever, including evaluating foliar micronutrients, in-furrow biologicals, insecticides, fungicides and new novel seed treatments to make your stand get up faster and stronger. And on top of all that, you can also get sawfly protection with our new semi-solid stemmed products that show excellent tolerance to sawfly pressure.

Only CROPLAN provides this level of intelligence. And you can only find CROPLAN seed at the best retailers in America.

REVOLUTIONARY GRASSY WEED CONTROL

CROPLAN seed is pleased to offer the CoAXium Wheat Production System as a part of our wheat lineup. Created in part by wheat farmers for wheat farmers, this system provides cost-effective, excellent control of annual and perennial grasses, higher quality grain, and increased yield potential.

Additionally, it combines elite wheat varieties, the AXigen® trait and Aggressor® herbicide with an industry-wide stewardship program. AXigen® is an ACCase herbicide-tolerant trait that protects wheat varieties from Aggressor® herbicide, which delivers effective, consistent, broad-spectrum control of problem grasses.

When used in conjunction with CoAXium® varieties, Aggressor® herbicide provides systemic and selective broad-spectrum control of these problem grasses:

- Barnyard grass
- Bromus species, including ALS-resistant biotypes
- Feral and cereal rye
- Jointed goat grass, including ALS-resistant biotypes
- Wild oats (non-resistant Group1)
- Volunteer cereals

CROPLAN CP3055

Hard Red Spring

Standability	4				
Bacterial Leaf Streak			2		
Test Weight	4				
Protein	4				

- High yield potential European-style genetics with a solid disease package
- Moderate yield response to nitrogen; as a full season product there is opportunity for split-applied nitrogen; additional nitrogen increases protein %
- Very large plant type and full-season maturity allows for very high yield potential
- Semi-solid stem variety for saw-fly tolerance; good stress tolerance for a great western fit

CROPLAN CP3099A

Hard Red Spring

Standability				2	
Bacterial Leaf Streak		4			
Test Weight			3		
Protein	5				

- Extremely high yield potential with unique genetics in the industry
- Large biomass and an awnless head provide excellent forage potential; good tonnage and very good quality
- Lower protein; additional nitrogen and sulfur may increase both yield and protein potential
- Research showed increases in yield with higher populations; good standability in most environments

CROPLAN CP3119A

Hard Red Spring

Standability				2	
Bacterial Leaf Streak		4			
Test Weight		4			
Protein		4			

- High-yielding European style genetics brings an awnless product with incredible biomass
- Semi-solid stem for WSS tolerance; stress tolerance and lower response to inputs; great Western-style wheat
- High yield potential; lower-protein can be improved with N management
- Extended-season wheat with longer grain-fill gives higher yield potential

CROPLAN CP3188

Hard Red Spring

Standability				3	
Bacterial Leaf Streak		4			
Test Weight			3		
Protein			3		

- Excellent performance under stressed conditions; top-end yield potential on the most productive acres
- Low RTN and lower RTP gives a steady performance across acres; responds to additional nitrogen for more yield and protein potential
- Lower, acceptable protein; total protein/Ac being higher than average
- Above average FHB tolerance; fungicide recommended; manage for BLS

KEY**SCALE:**

1 = Excellent
2 = Strong

3 = Acceptable

4 = Manage

5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CROPLAN CP3322

Hard Red Spring

NEW

Characteristics	Standability	3	2		
	Bacterial Leaf Streak	3			
	Test Weight	3			
	Protein	3			

- Broadly adapted top-end yield potential product; excellent drought stress; average protein content and semi-solid stem for saw-fly tolerance
- Taller plant holds height; creates a thicker canopy for strong Western performance; good straw strength for the East
- Performs well in lower-yielding environments without sacrificing top-end yield potential
- Medium-late flowering/maturity; average BLS; use fungicide for FHB control

CROPLAN CP3530

Hard Red Spring

Characteristics	Standability	4			
	Bacterial Leaf Streak		2		
	Test Weight		2		
	Protein			1	

- Excellent yield potential and strong protein
- Very stable product across environments
- Good fusarium head blight with strong stem rust and BLS; good leaf rust tolerance
- Good standability with moderate populations; higher yield potential when populations are increased in environments with lower lodging risk

CROPLAN CP3915

Hard Red Spring

Characteristics	Standability	1			
	Bacterial Leaf Streak	1			
	Test Weight	1			
	Protein	1			

- High yield and protein potential that can increase with additional nitrogen
- Excellent agronomics, very good BLS tolerance and straw strength
- Excels under higher yield environments; stable in lower yielding environments
- High response to population, recommended 1.4-1.7M seeds/Ac

CROPLAN CP3201AX

Hard Red Spring

Characteristics	Standability	1			
	Bacterial Leaf Streak	2			
	Test Weight	2			
	Protein	2			

- Can control resistant weeds by utilizing CoAXium® technology driven by Aggressor® herbicide using an ACCase inhibitor
- Nicely balanced product for both yield and protein potential, for success across markets
- Good agronomics and yield potential, especially in moderate to higher yielding environments
- Low demand for additional populations, but responds well to higher nitrogen availability

KEY**SCALE:**

1 = Excellent
2 = Strong

3 = Acceptable

4 = Manage

5 = Not Recommended

Product descriptions and ratings are generated from Answer Plot® trials and/or from the genetics supplier and may change as additional data is gathered.

CROPLAN

HARD RED WINTER WHEAT

WE'RE BRINGING GLOBAL WHEAT BREEDING TO YOUR BACK YARD.

Optimize Seed ROI

To achieve farm topping yield potential, you need to do many things right. And that starts with CROPLAN® varieties.

This is seed that puts you on the path to maximizing ROI potential on each acre, beginning with exceptionally high performing genetics, which bring agronomic characteristics important in maximizing yield potential. But even bigger advantages come with the data and intelligence we build on top of these revolutionary wheat varieties.

ANSWER PLOT® RESEARCH PROVIDES NITROGEN AND FUNGICIDE RESPONSE DATA FOR CROPLAN WHEAT VARIETIES.

That means you can fine tune management and increase yield potential in the most economically efficient manner.

- There's a 33.1 bu/A average yield response advantage¹ when varieties are managed according to their Response to Nitrogen (RTN).
- Then, there's a 20.8 bu/A average yield response advantage¹ when varieties are managed according to their Response to Fungicide (RTF).

EACH VARIETY IS DIFFERENT, AND THEIR AGRONOMIC REQUIREMENTS ARE, TOO.

Putting every product into the same environment won't maximize your ROI. Instead, give each variety what it needs when it needs it. And just as importantly, eliminate actions that don't provide the yield and revenue impact you desire.

Only CROPLAN provides this level of intelligence. And you can only find CROPLAN varieties at the best retailers in America.

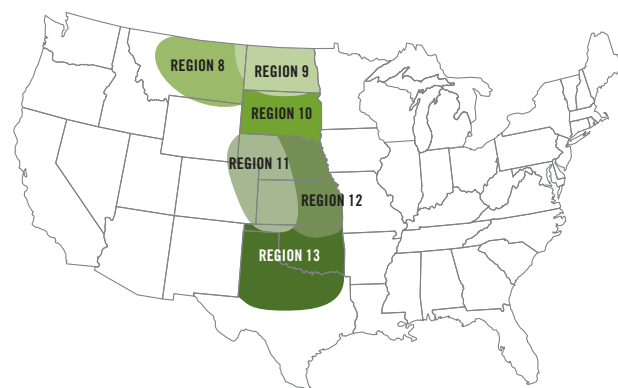

REVOLUTIONARY GRASSY WEED CONTROL

CROPLAN seed is pleased to offer the CoAXium Wheat Production System in part of our wheat lineup. Created in part by wheat farmers for wheat farmers, this system provides cost-effective, excellent control of annual and perennial grasses, higher quality grain, and increased yield potential.

Additionally, it combines elite wheat varieties, the AXigen® trait and Aggressor® herbicide with an industry-wide stewardship program. AXigen® is an ACCase herbicide-tolerant trait that protects wheat varieties from Aggressor® herbicide, which delivers effective, consistent, broad-spectrum control of problem grasses.

When used in conjunction with CoAXium® varieties, Aggressor® herbicide provides systemic and selective broad-spectrum control of these problem grasses:

- Barnyard grass
- Bromus species, including ALS-resistant biotypes
- Feral and cereal rye
- Jointed goat grass, including ALS-resistant biotypes
- Wild oats (non-resistant Group1)
- Volunteer cereals

- Then, there's a 20.8 bu/A average yield response advantage¹ when varieties are managed according to their Response to Fungicide (RTF).

EACH VARIETY IS DIFFERENT, AND THEIR AGRONOMIC REQUIREMENTS ARE, TOO.

Putting every product into the same environment won't maximize your ROI. Instead, give each variety what it needs when it needs it. And just as importantly, eliminate actions that don't provide the yield and revenue impact you desire.

Only CROPLAN provides this level of intelligence. And you can only find CROPLAN varieties at the best retailers in America.

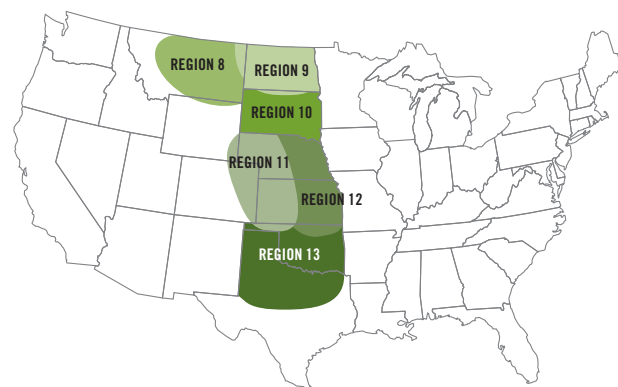

REVOLUTIONARY GRASSY WEED CONTROL

CROPLAN seed is pleased to offer the CoAXium Wheat Production System in part of our wheat lineup. Created in part by wheat farmers for wheat farmers, this system provides cost-effective, excellent control of annual and perennial grasses, higher quality grain, and increased yield potential.

Additionally, it combines elite wheat varieties, the AXigen® trait and Aggressor® herbicide with an industry-wide stewardship program. AXigen® is an ACCase herbicide-tolerant trait that protects wheat varieties from Aggressor® herbicide, which delivers effective, consistent, broad-spectrum control of problem grasses.

When used in conjunction with CoAXium® varieties, Aggressor® herbicide provides systemic and selective broad-spectrum control of these problem grasses:

- Barnyard grass
- Bromus species, including ALS-resistant biotypes
- Feral and cereal rye
- Jointed goat grass, including ALS-resistant biotypes
- Wild oats (non-resistant Group1)
- Volunteer cereals

CROPLAN

CROPLAN CP7050AX

Hard Red Winter

Standability	2
Fusarium Head Blight	2
Test Weight	2
Protein	1
Winterhardness	2

- Strong yield potential; early-maturing CoAXium® wheat variety
- Strong straw and test weight; tolerates acid soils; resistant to stripe rust and soilborne mosaic virus
- Consistent performance potential across environments and management zones, excels in tougher acres
- Fungicide recommended in areas with stem rust

NEW**CROPLAN CP7319AX**

Hard Red Winter

Standability	3
Fusarium Head Blight	N/A
Test Weight	2
Protein	2
Winterhardness	2

- Excellent yield potential in an early maturity product
- Taller plant type; good fit for grazing operations
- Very tolerant to low pH soils
- High yield potential line for the Central Plains

CROPLAN CP7017AX

Hard Red Winter

Standability	2
Fusarium Head Blight	1
Test Weight	3
Protein	3
Winterhardness	1

- Medium maturity CoAXium® variety with excellent yield potential
- Resistant to soilborne mosaic virus; strong tolerance to tough soils and lower pH
- Broadly adapted for high yield potential across multiple environments
- Responds well to increased nitrogen and population on offensive acres

CROPLAN CP7266AX

Hard Red Winter

Standability	2
Fusarium Head Blight	2
Test Weight	2
Protein	2
Winterhardness	2

- Excellent yield potential in a medium maturity product
- Very good standability for more productive acres
- Great fit for lower-yielding environments; still has top-end yield potential
- Responds well to increased nitrogen and population on offensive acres

CROPLAN CP7220

Hard Red Winter

**Characteristics**

Standability					2
Fusarium Head Blight			3		
Test Weight					1
Protein					2
Winterhardiness					2

- Broadly adapted for northern NE through Dakotas and into MT
- Very good standability and stress tolerance; placement from high to low yield potential acres
- Strong baking qualities
- Fungicide recommended in areas with leaf and stripe rust

CROPLAN CP7909

Hard Red Winter

**Characteristics**

Standability				3	
Fusarium Head Blight			4		
Test Weight				3	
Protein					1
Winterhardiness					1

- Excellent yield and high protein potential
- Very good winterhardiness
- Broad adaptation over a variety of conditions; outstanding yield potential in high-yield environments
- Excellent soilborne mosaic virus resistance

CROPLAN CP7869

Hard Red Winter

**Characteristics**

Standability					2
Fusarium Head Blight			3		
Test Weight					2
Protein					2
Winterhardiness					2

- High yield potential and strong stress tolerance
- Excellent standability; push nitrogen to maintain adequate protein
- Best fit is on well-managed dryland or irrigated acres
- Acceptable fusarium head blight tolerance; excellent stripe, stem and leaf rust tolerance

KEY**SCALE:**

1 = Excellent
2 = Strong

CROPLAN

**SOFT RED
WINTER WHEAT**

WITH 20+ YEARS OF EXPERTISE, BEING REVOLUTIONARY COMES EASY.

Optimize Seed ROI

To achieve farm topping yield potential, you need to do many things right. And that starts with CROPLAN® varieties.

This is seed that puts you on the path to maximizing ROI potential on each acre, beginning with exceptionally high performing genetics, which bring agronomic characteristics important in maximizing yield potential. But even bigger advantages come with the data and intelligence we build on top of these revolutionary wheat varieties.

ANSWER PLOT® RESEARCH PROVIDES NITROGEN AND FUNGICIDE RESPONSE DATA FOR CROPLAN WHEAT VARIETIES.

That means you can fine tune management and increase yield potential in the most economically efficient manner.

- There's a 7.2 bu/A average yield response advantage¹ when varieties are managed according to their Response to Nitrogen (RTN).

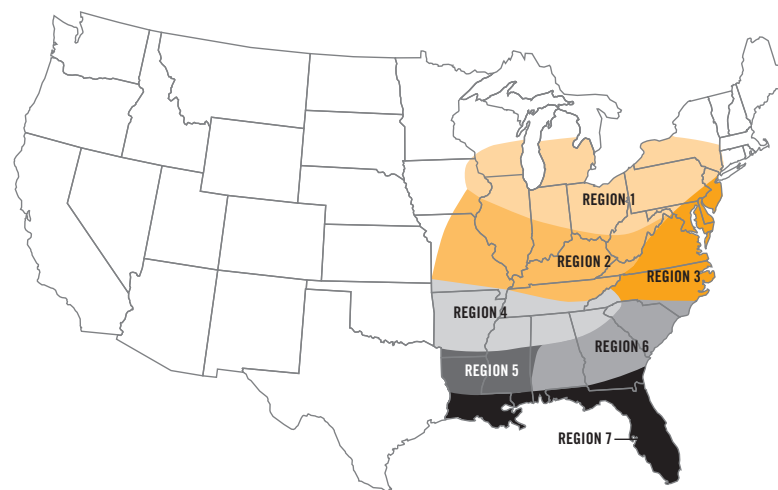

Then, there's a 10.5 bu/A average yield response advantage¹ when varieties are managed according to their Response to Fungicide (RTF).

1. 2019 Answer Plot® data.

EACH VARIETY IS DIFFERENT, AND THEIR AGRONOMIC REQUIREMENTS ARE, TOO.

Putting every product into the same environment won't maximize your ROI. Instead, give each variety what it needs when it needs it. And just as importantly, eliminate actions that don't provide the yield and revenue impact you desire.

Only CROPLAN seed provides this level of intelligence. And you can only find CROPLAN seed varieties at the best retailers in America.

CROPLAN CP8081

Soft Red Winter

Standability						1
Fusarium Head Blight						2
Test Weight						2
Winterhardiness						2

- Outstanding yield potential; broadly adapted over a variety of soils and management regimes
- Early-medium maturity with excellent winterhardiness; very good standability
- Native tolerance to fusarium head blight
- Excellent test weight; good broad-spectrum disease-resistance package

CROPLAN CP8022

Soft Red Winter

Standability						2
Fusarium Head Blight						1
Test Weight						2
Winterhardiness						1

- Excellent yield potential in highly productive environments
- State-of-the-art fusarium head blight resistance
- Excellent test weight and stripe rust resistance
- Plant on time to encourage tilling

CROPLAN CP8045

Soft Red Winter

Standability						2
Fusarium Head Blight						2
Test Weight						3
Winterhardiness						1

- Outstanding yield potential; broadly adapted over a variety of soils
- Strong disease-tolerance package

CROPLAN CP8224

Soft Red Winter

Standability						1
Fusarium Head Blight						2
Test Weight						1
Winterhardiness						1

- High yield potential variety to replace CP9203
- Excellent test weight and winterhardiness
- Awnless variety with excellent standability
- Acceptable Septoria and powdery mildew tolerance

CROPLAN

FIELD PEA

WITH TESTING THIS METICULOUS, YOU KNOW WE'RE NEXT-LEVEL.

Rigorous testing is how we got here. Matching the right genetics resulting in high yield potential? That's where we're going.

Field peas might be the newest CROPLAN crop, but they're not new to us. We've spent three years amassing varietal data in order to bring the best results to operations across the U.S.

SELECT THE RIGHT PRODUCT

A key factor in selecting the right variety for your operation is to match the right variety to the right yield environment to optimize yield potential. Each CROPLAN variety is evaluated for flowering data, maturity, disease tolerance, standability and harvestability so that you can be certain the variety you choose matches your operation's goals.

MANAGEMENT

While field peas thrive in a variety of dryer soil types, from sandy to heavy clay regions, they have a lower tolerance for water-logged conditions. So, poorly drained or saline soils should be avoided.

EACH VARIETY IS DIFFERENT, AND THEIR AGRONOMIC REQUIREMENTS ARE, TOO.

Putting every product into the same environment won't maximize your ROI potential. Instead, give each variety what it needs when it needs it. And just as importantly, eliminate actions that don't provide the yield and revenue impact you desire.

Only CROPLAN seed provides this level of intelligence. And you can only find CROPLAN seed at the best retailers in America.

When it comes to field peas, let us be your trusted advisor. We'll bring our years of testing and expertise to help make this crop profitable for your farm.

TECHNOLOGY

PROPER MANAGEMENT PROTECTS TECHNOLOGY'S VALUE

Sound management practices and compliance with stewardship requirements will help protect the benefits and value of biotech trait seed technology for future generations.

INSECT RESISTANCE MANAGEMENT

Insect-protected crops are genetically improved to provide in-plant protection against selected insect pests. Beneficial insects are not affected. To preserve the benefits and insect protection of these technology crops, Bayer CropScience, Syngenta Crop Protection and Corteva Agriscience have developed IRM guidelines that must be incorporated by everyone purchasing and planting insect-protected crops.

Verification Required The last patent on the original Roundup Ready® soybean trait expired a few years ago and U.S. farmers may legally plant saved seed from some varieties of soybean containing the Roundup Ready® soybean trait. However, it is important that you check with your seed supplier to determine if a specific Roundup Ready® soybean variety is covered by other intellectual property rights, and if so, the policy for saving seed of that variety.

Higher Seeding Rate A higher seeding rate may be required for bin-run Roundup Ready® soybeans compared to new branded seed.

Yield Loss Roundup Ready 2 Yield® soybean, Roundup Ready 2 Xtend® soybean, and XtendFlex® soybean varieties typically have a higher yield opportunity than Roundup Ready® soybean varieties.

Cleanout Loss Loss of seed and/or shrink occurs during the seed cleaning and handling processes for bin-run seed.

Seed Treatment Costs Treating your seed will add costs—both the cost of the treatment and the application of that treatment.

Lost Income Every bushel of saved seed you plant is a bushel you're not selling as commodity grain.

Increased Seed Management If you plan to save and bin-run Roundup Ready® soybeans for planting, you will have to manage your harvest operations and grain storage so that the seed isn't co-mingled with other seed that's covered by intellectual property rights.

High Value of New Branded Seed

Latest Technology

- // High-yielding soybean technologies
- // Better variety options
- // Leading seed treatment options

Customer Service

- // Dealer agronomic support before and after the sale
- // Replant policy support
- // Convenient packaging and delivery

Reliable Germination and Quality

- // Rigorously tested and meets U.S. Federal Seed Act requirements
- // Free of seed-borne diseases
- // Properly stored and conditioned

For a list of Bayer's trait patents go to cs.bayerpatents.bayer.com

For questions regarding seed intellectual property, or to anonymously report a saved seed tip, you can contact Bayer in the following ways:

1. Call 1-866-99-BAYER
2. Send a letter: Trait Stewardship, 622 Emerson Rd., Suite 150, Creve Coeur, MO 63141
3. Submit a contact request at cropscience.bayer.us/contact or scan the QR code

TECHNOLOGY

CORN INSECT RESISTANCE MANAGEMENT OVERVIEW¹

QUICK COMPLIANCE GUIDE FOR DEALERS AND FARMERS

1 REFUGE SIZE

Plant the correct size refuge for the area and corn product.

► The Corn-Growing Area

- 20% required for some B.t. products (20 acres of refuge for every 80 acres of B.t.)
- 5% only for SmartStax[®], Trecepta[®] and VT Double PRO[®] (5 acres of refuge for every 95 acres of B.t.)

► The Cotton-Growing Area

- 20% only for SmartStax[®] and VT Double PRO[®] (20 acres of refuge for every 80 acres of B.t.)

2 REFUGE LOCATION

Plant the required refuge within each field that contains B.t. insect-protected corn. There are other options, but an in-field refuge is always accepted. The refuge should always be a minimum of four contiguous rows wide.

3 REFUGE PLANTING

In each field, plant your refuge first before planting any insect-protected corn. This will ensure that the minimum refuge size requirement is met should unforeseen circumstances (e.g., adverse weather) alter your planting schedule and strategy. Use a refuge product that contains no B.t. insect-protection traits (e.g., Roundup Ready[®] or conventional corn are acceptable). Growers must read the IRM/Grower Guide for complete refuge planting requirements.

4 TREATMENT

If you need to treat your refuge with a non-B.t. foliar insecticide, you may have to treat the B.t. technology in a similar manner. Growers must read the IRM/Grower Guide for complete treatment options.

COMMON REFUGE CONFIGURATIONS

► In-Field Configuration Examples

Minimum of four rows

► Adjacent-Field Configuration Examples

Separated by road, path, ditch, etc., but not by another field

SEPARATE REFUGE CONFIGURATIONS

► Block

≤ 1/2 mile

≤ 1/2 mile

► Perimeter

≤ 1/2 mile

► Strips

≤ 1/2 mile

1. Provided as a summary only. Farmers must read the IRM/Grower Guide prior to planting for important information on planting and insect resistance management.

2. Traited = B.t., RW or B.t./RW.

Content on this page provided by Bayer, please contact Bayer for more information. Due to factors such as weather, crop production patterns, product application and other factors, results to be obtained, including but not limited to yields or financial performance, cannot be predicted or guaranteed by Bayer or WinField United. Actual results may vary.

REFUGE REQUIREMENTS FOR BIOTECH CORN PRODUCTS^{1, 2}

	% NON-B.T. REFUGE	CONFIGURATIONS	REFUGE LOCATION
SMARTSTAX® RIB COMPLETE® CORN BLEND³	5% in the bag	—	No separate planted refuge is required; Not recommended for the Cotton-Growing Area. If planted, an additional 20% structured refuge is required.
SMARTSTAX® RIB COMPLETE® WITH RNAI TECHNOLOGY	5% in the bag	—	No separate planted refuge is required; Not recommended for the Cotton-Growing Area. If planted, an additional 20% structured refuge is required.
VT DOUBLE PRO® RIB COMPLETE® CORN BLEND³	5% in the bag	—	No separate planted refuge is required; Not recommended for the Cotton-Growing Area. If planted, an additional 20% structured refuge is required.
VT4PRO™ RIB COMPLETE® CORN BLEND	5% in the bag	—	No separate planted refuge is required; Not recommended for the Cotton-Growing Area. If planted, an additional 20% structured refuge is required.
DROUGHTGARD® HYBRIDS WITH VT DOUBLE PRO® RIB COMPLETE® CORN BLEND³	5% in the bag	—	No separate planted refuge is required; Not recommended for the Cotton-Growing Area. If planted, an additional 20% structured refuge is required.
TRECEPTA® RIB COMPLETE® CORN BLEND	5% in the bag	—	No separate planted refuge is required; Not recommended for the Cotton-Growing Area. If planted, an additional 20% structured refuge is required.
POWERCORE® ENLIST® REFUGE ADVANCED	5% in the bag	—	No separate planted refuge is required; Not recommended for the Cotton-Growing Area. If planted, an additional 20% structured refuge is required.

VT4PRO™ WITH RNAI TECHNOLOGY	5% corn-growing areas; 20% cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within, adjacent or within 1/2 mile from VT4PRO™ with RNAi Technology field
POWERCORE® ENLIST®	5% corn-growing areas; 20% cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within, adjacent or within 1/2 mile from PowerCore® Enlist® field
AGRISURE® TOTAL	5% in the bag, 20% supplemental cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within or adjacent to Agrisure® Total
DURACADE™	5% in the bag, 20% supplemental cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within or adjacent to Duracade™ field
HERCULEX® XTRA INSECT PROTECTION	20% corn-growing areas; 50% cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within or adjacent to Herculex® XTRA field; if adjacent, may be separated by a road, path, ditch, etc., but not another field
HERCULEX® I INSECT PROTECTION	20% corn-growing areas; 50% cotton-growing areas	Block, Perimeter, Strips, Adjacent	Within, adjacent to or within 1/2 mile from Herculex® field

1. All refuge configurations require a minimum of four rows.

2. Provided as a summary only. Farmers must read the IRM/Grower Guide prior to planting.

3. SmartStax® RIB Complete®, Trecepta® RIB Complete, VT Double PRO® RIB Complete®, VT4PRO™ RIB Complete Technology and DroughtGard® Hybrids with VT Double PRO® RIB Complete® corn blends are each a blend of 95% traited seed and 5% refuge seed interspersed in the bag and do not require a separate structured refuge in corn-growing areas.

For more detailed refuge requirements please visit: <https://traits.bayer.com/stewardship/Pages/Insect-Resistance-Management.aspx>

Corn trait technology incorporated into these seeds is commercialized under license from Syngenta Seeds, LLC. Herculex® Technology incorporated into these seeds is commercialized under license from Corteva Agriscience LLC. HERCULEX® and the HERCULEX Shield are trademarks of Corteva Agriscience LLC.

Seed products with the LibertyLink® (LL) trait are resistant to the herbicide glufosinate ammonium, an alternative to glyphosate in corn, and combine high-yielding genetics with the powerful, non-selective, post-emergent weed control of Liberty® herbicide for optimum yield and excellent weed control. LibertyLink®, Liberty® and the Water Droplet logo are registered trademarks of BASF.

Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium-based herbicides. Agrisure® and Viptera™ are trademarks of a Syngenta Group Company.

Content on this page provided by Bayer, Corteva Agriscience and Syngenta Group Company, please contact them for more information. Due to factors such as weather, crop production patterns, product application and other factors, results to be obtained, including but not limited to yields or financial performance, cannot be predicted or guaranteed by Bayer, Corteva Agriscience and Syngenta Group Company or WinField United. Actual results may vary.

EXCELLENCE THROUGH STEWARDSHIP

Bayer is a member of Excellence Through Stewardship® (ETS).

Bayer products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Bayer's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. Commercialized products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from this product can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Excellence Through Stewardship® is a registered trademark of Global Stewardship Group.

Forage Genetics International, LLC ("FGI") is a member of Excellence Through Stewardship® (ETS). FGI products are

commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with FGI's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. Any crop or material produced from this product can only be exported to, or used, processed or sold only in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotechnology traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for this product. Growers should refer to biotradestatus.com for any updated information on import country approvals. Through Stewardship® is a registered trademark of Global Stewardship Group.

Corteva Agriscience is a member of Excellence Through

Stewardship® (ETS). Corteva Agriscience products are commercialized in accordance with ETS Product Launch Stewardship Guidance and in compliance with the Corteva Agriscience policies regarding stewardship of those products. In line with these guidelines, Corteva Agriscience's product launch process for responsible launches of new products includes a long-standing process to evaluate export market information, value chain consultations, and regulatory functionality. Growers and end-users must take all steps within their control to follow appropriate stewardship requirements and confirm their buyer's acceptance of the grain or other material being purchased. For more detailed information on the status of a trait or stack, please visit www.biotradestatus.com.

Excellence Through Stewardship® is a registered trademark of Global Stewardship Group.

Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, **including applicable refuge requirements for insect resistance management**, for the biotechnology traits expressed in the seed as set forth in the Technology/Stewardship Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation and agreement to comply with the most recent stewardship requirements.

INSECT RESISTANCE MANAGEMENT

IMPORTANT IRM INFORMATION: Always read and follow IRM

requirements. Insect-protected crops are genetically improved to provide in-plant protection against selected insect pests. Beneficial insects are not affected. To preserve the benefits and insect protection of these technology crops, Bayer, Syngenta Crop Protection and Dow AgroSciences have developed insect resistance management (IRM) guidelines that must be incorporated by everyone purchasing and planting insect-protected crops.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. It is a violation of federal and state law to use any pesticide product other than in accordance with its labeling. NOT ALL formulations of dicamba or glyphosate are approved for in-crop use with Roundup Ready 2 Xtend® soybeans. NOT ALL formulations of dicamba, glyphosate or glufosinate are approved for in-crop use with products with XtendFlex® Technology. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED FOR SUCH USES AND APPROVED FOR SUCH USE IN THE STATE OF APPLICATION. Contact the U.S. EPA and your state pesticide regulatory agency with any questions about the approval status of dicamba herbicide products for in-crop use with products with XtendFlex® Technology.

B.t. products may not yet be registered in all states. Check with your seed brand representative for the registration status in your state.

Refuge seed may not always contain the DroughtGard® trait. **IMPORTANT IRM INFORMATION:** Certain products are sold as RIB Complete® corn blend products, and do not require the planting of a structured refuge except in the Cotton-Growing Area where corn earworm is a significant pest. Products sold without refuge in the bag (non-RIB Complete) require the planting of a structured refuge. See the IRM/Grower Guide for additional information. Always read and follow IRM requirements.

Roundup Ready® Technology contains genes that confer tolerance to glyphosate. Roundup Ready® 2 Technology contains genes that confer tolerance to glyphosate. Roundup Ready 2 Xtend® soybeans contain genes that confer tolerance to glyphosate and dicamba. Products with XtendFlex® Technology contains genes that confer tolerance to glyphosate, glufosinate and dicamba. Plants that are not tolerant to glyphosate may be damaged or killed if exposed to those herbicides. Plants that are not tolerant to glyphosate, dicamba, and/or glufosinate may be damaged or killed if exposed to those herbicides. Plants that are not tolerant to dicamba may be damaged or killed if exposed to those herbicides. Contact your seed brand dealer or refer to the Bayer Technology Use Guide for recommended weed control programs.

No dicamba may be used in-crop with seed with Roundup Ready® Xtend Technology, unless and until approved or specifically permitted, and no dicamba formulations are currently registered for such use in the 2024 season. Please follow <https://www.roundupreadyxtend.com/pages/xtendimax-updates.aspx> for status updates.

Insect control technology provided by Vip3A is utilized under license from Syngenta Crop Protection AG. Herculex® is a registered trademark of Dow AgroSciences LLC. Agrisure Viptera® is a registered trademark of a Syngenta group company. LibertyLink logo® and LibertyLink® are trademarks of BASF Corporation. Respect the Refuge and Corn Design® and Respect the Refuge® are registered trademarks of National Corn Growers Association. Acceleron®, DroughtGard®, RIB Complete®, Roundup Ready 2 Technology and Design®, Roundup Ready 2 Xtend®, Roundup Ready 2 Yield®, Roundup Ready®, SmartStax®, Trecepta®, TruFlex®, VT Double PRO®, VT4PRO™, VT4PRO™ and XtendFlex® are trademarks of Bayer Group.

Important: Always read and follow label and bag tag instructions; only those labeled as tolerant to glufosinate may be sprayed with glufosinate ammonium based herbicides.

Agrisure® Technology incorporated into these seeds is commercialized under license from Syngenta Seeds, Inc. Herculex® Technology incorporated into these seeds is commercialized under license from Dow AgroSciences LLC. HERCULEX® and the HERCULEX shield are registered trademarks of Dow AgroSciences LLC.

Seed products with the LibertyLink® (LL) trait are resistant to the herbicide glufosinate ammonium, an alternative to glyphosate in corn, and combine high-yielding genetics with the powerful, non-selective, postemergent weed control of Liberty® herbicide for optimum yield and excellent weed control. LibertyLink®, Liberty® and the Water Droplet logo are registered trademarks of BASF Corporation.

Seeds containing the Enlist, Herculex and PowerCore traits are protected under numerous US patents. Seeds containing patented traits can only be used to plant a single commercial crop and cannot be saved or replanted. You acknowledge and agree to be bound by the terms and conditions of the following documents in effect at the time of planting of this seed: (i) the Technology Use Agreement and (ii) the Product Use Guides for all technologies in this seed, including the Herbicide Resistance Management (HRM), and Use requirements detailed therein (www.corteva.us/Resources/trait-stewardship.html). To plant Enlist, Herculex and PowerCore seed, you must have a limited license from Corteva Agriscience. In consideration of the foregoing, Corteva Agriscience grants to the Grower the limited license to use its technology to produce only a single commercial crop in the United States under the terms and conditions set forth in the Technology Use Agreement in effect at the time of planting of this seed.

ALWAYS READ AND FOLLOW HERBICIDE LABEL DIRECTIONS

PRIOR TO USE: Always read and follow herbicide label directions prior to use: Enlist® products contain the Enlist trait that provides crop safety for use of labeled over-the-top applications of glyphosate, glufosinate and 2,4-D herbicides featuring Colex-D® technology when applied according to label directions. Following burndown, the only 2,4-D containing herbicide products that may be used with Enlist™ crops are products that feature Colex-D technology and are expressly labeled for use on Enlist crops. 2,4-D products that do not contain Colex-D technology are not authorized for use in conjunction with Enlist products. Enlist corn contains genes that confer tolerance to 2,4-D and -fop herbicides. 2,4-D and -fop herbicides will damage or kill crops that are not tolerant to 2,4-D or -fops.

IRM - Properly managing trait technology is key to preserving it as a long-term crop protection tool. Growers who fail to comply with IRM requirements risk losing access to this product. To help preserve the effectiveness of B.t. corn technologies, growers planting B.t. corn technologies are required to follow an IRM Plan. Consult the Corn Product Use Guide for appropriate refuge configuration options. Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, including applicable refuge requirements for insect resistance management, for the biotechnology traits expressed in the seed as set forth in the Technology Use Agreement and Product Use Guide. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements. For complete details on IRM requirements for hybrids with Bt technology, including refuge examples and important information on the use of insecticides on refuge and Bt corn acres, please consult appropriate Product Use Guide. Go to www.corteva.us/Resources/trait-stewardship.html to download the latest Corteva Agriscience Corn Product Use Guide.

Enlist E3® Soybeans and PowerCore® Enlist® Refuge Advanced® Corn

Seeds containing the PowerCore® Enlist®, PowerCore® Enlist® Refuge Advanced®, and Enlist® Corn - REFUGE traits are protected under one or more U.S. patents which can be found at: www.traitstewardship.com. The purchase of this traited seed includes a limited license to produce a single crop in the United States. The use of seed from such a crop and/or the progeny thereof for propagation or seed multiplication or for production or development of a hybrid or different variety of seed is strictly prohibited. You acknowledge and agree to be bound by the terms and conditions of the following documents in effect at the time of planting of this seed: (i) the Corteva Agriscience Technology Use Agreement and (ii) the Product Use Guides for all technologies in this seed, including the Herbicide Resistance Management (HRM), and Use requirements.

To plant PowerCore Enlist, PowerCore Enlist Refuge Advanced, and Enlist Corn - REFUGE seed, you must have a limited license from Corteva Agriscience (or other appropriate affiliates). In consideration of the foregoing, Corteva Agriscience grants to the Grower a limited license to use its technology to produce only a single commercial crop in the United States under the terms and conditions set forth in the Technology Use Agreement in effect at the time of planting of this seed.

Enlist E3® soybean seeds containing the Enlist® trait can only be used to plant a single commercial crop. It is unlawful to save and replant Enlist E3® soybeans. Additional information and limitations on the use of these products are provided in the Corteva Agriscience Technology Use Agreement and Enlist® Soybean Product Use Guide. U.S. patents for Corteva Agriscience technologies can be found at the following webpage: www.corteva.us/Resources/trait-stewardship.html.

Following burndown, Enlist Duo® and Enlist One® herbicides with Colex-D® technology are the only herbicides containing 2,4-D that are authorized for preemergence and postemergence use with Enlist® corn and soybeans. Consult Enlist® herbicide labels for weed species controlled. Enlist Duo and Enlist One herbicides are not registered for use or sale in all states and counties; are not registered in AK, CA, CT, HI, ID, MA, ME, MT, NH, NV, OR, RI, UT, VT, WA and WY; and have additional subcounty restrictions in AL, GA, TN and TX, while existing county restrictions still remain in FL. All users must check "Bulletins Live! Two" no earlier than six months before using Enlist One or Enlist Duo. To obtain "Bulletins," consult epa.gov/espp/, call 1-844-447-3813, or email ESPP@epa.gov. You must use the "Bulletin" valid for the month and state and county in which Enlist One or Enlist Duo are being applied. Contact your state pesticide regulatory agency if you have questions about the registration status of Enlist® herbicides in your area. **ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. IT IS A VIOLATION OF FEDERAL AND STATE LAW TO USE ANY PESTICIDE PRODUCT OTHER THAN IN ACCORDANCE WITH ITS LABELING. ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED FOR SUCH USE IN THE STATE OF APPLICATION. USE OF PESTICIDE PRODUCTS, INCLUDING, WITHOUT LIMITATION, 2,4-D-CONTAINING PRODUCTS NOT AUTHORIZED FOR USE WITH ENLIST CORN AND SOYBEANS, MAY RESULT IN OFF-TARGET DAMAGE TO SENSITIVE CROPS/AREAS AND/OR SUSCEPTIBLE PLANTS, IN ADDITION TO CIVIL AND/OR CRIMINAL PENALTIES.** Additional product-specific stewardship requirements for Enlist crops, including the Enlist Product Use Guide, can be found at www.traitstewardship.com.

POWERCORE® is a registered trademark of Monsanto Technology LLC. POWERCORE® multi-event technology developed by Corteva Agriscience and Monsanto. Liberty®, LibertyLink® and the Water Droplet Design are registered trademarks of BASF.® Roundup and Roundup Ready are registered trademarks of Bayer Group. Always follow IRM, grain marketing and all other stewardship practices and pesticide label directions. B.t. products may not yet be registered in all states. Check with your seed representative for the registration status in your state.

The transgenic soybean event in Enlist E3® soybeans is jointly developed and owned by Corteva Agriscience and M.S. Technologies, L.L.C.

Excellence Through Stewardship® is a registered trademark of Excellence Through Stewardship.

™ ® Trademarks of Corteva Agriscience and its affiliated companies.

GENERAL DISCLAIMERS

Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the growers' fields.

Important: Always read and follow label instructions. Some products may not be registered for sale or use in all states or counties. Please check with your local extension service to ensure registration status.

SOYBEAN AND CANOLA PIRACY

Seed containing a patented trait can only be used to plant a single commercial crop. It is unlawful to save and replant seed from that crop. Examples of seed containing a patented trait include but are not limited to Roundup Ready 2 Yield® soybeans, Roundup Ready 2 Xtend® soybeans, XtendFlex® soybeans, Roundup Ready® spring canola, Roundup Ready® winter canola, and TruFlex® canola with Roundup Ready® Technology. Additional information and limitations on the use of these products are provided in the Technology Stewardship Agreement and the Bayer Technology Use Guide: tug.bayer.com. U.S. patents for Bayer technologies can be found at the following webpage: cs.bayerpatents.bayer.com

ALFALFA

HarvXtra® Alfalfa with Roundup Ready® Technology: Purchase and use of HarvXtra® Alfalfa with Roundup Ready® Technology is subject to a Seed and Feed Use Agreement, requiring that products of this technology can only be used on farm or otherwise be used in the following states: Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming. In addition, due to the unique cropping practices do not plant HarvXtra® Alfalfa with Roundup Ready® Technology in Imperial County, California, pending import approval and until Forage Genetics International, LLC (FGI) grants express permission for such planting. HarvXtra® Alfalfa with Roundup Ready® Technology has pending import approvals. **GROWERS MUST DIRECT ANY PRODUCT PRODUCED FROM HARVXTRA® ALFALFA WITH ROUNDUP READY® TECHNOLOGY SEED OR CROPS (INCLUDING HAY AND HAY PRODUCTS) ONLY TO UNITED STATES DOMESTIC USE.** Any crop or material produced from this product can only be exported to, or used,

processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted.
