TURNING THE PAGE TO 2026 IS A LOT EASIER WITH THE RIGHT INFORMATION.

2026

Of the countless decisions that go into a successful season, your seed decision is one of the most important. We know the impact the right seed can make, and more importantly, so do you. It's why this seed guide is in your hands right now. It's a responsibility we don't take lightly. Within these pages, you'll find products that put your needs first, with reliable performance and expertise that's with you every step of the way. CROPLAN® is proud to offer hybrids and varieties across five different crops, each tailored to deliver high performance across diverse growing conditions.

Your seed decision begins with our decision to comb the industry to find the very best products. We select from the largest pool of genetics and traits, focusing on factors that are most important to your success – disease tolerance, maturity, yield, and offering premium seed treatments as the CROPLAN standard – then our elite team of dedicated professionals get to work, to rapidly bring to market the right products for your unique acre.

Our seed has a lengthy journey before it goes to market. We take a data-driven approach ensuring that every seed recommendation is backed by real-world insights including from Answer Plot®. CROPLAN is about more than genetics—it's about understanding how

those genetics respond to your specific environment, management practices, and goals. Whether you're targeting top-end yield, managing challenging conditions, or looking to improve input efficiency, CROPLAN has the tools and expertise to guide your decisions with confidence. And with no hoops or hurdles from complicated grower programs, you get straightforward value—seed solutions that work for you, on your terms.

Last but certainly not least, the best decision we make every season is to entrust our success and yours to local independent ag retail experts. When it comes to seed expertise and local field knowledge, they continually raise the bar. No one can interpret all the data available and make custom recommendations with a “focused on you” approach like independent ag retail experts can. They're by your side all season long so you can be even more confident in your CROPLAN seed decision.

At WinField® United Canada, every decision we make is in service of bringing you the best products possible. You'll find them within the pages of this seed guide. With the help of your local independent ag retail, and the entire CROPLAN seed team, a successful 2026 season starts here.

Michael Kereluik,
Director, Product Line

PART OF YOUR COMMUNITY

AG THRIVES ON THE SUPPORT OF GOOD NEIGHBOURS

We're proud to support local partners and farmers through our pillars of community investment: Mental Health, Hunger, Education, and Community.

OUR INITIATIVES

Uplifting people and communities through volunteering and philanthropy is a fundamental part of how we operate every day. WinField United also undertakes two major community initiatives each year.

The Journey 5km by WinField United run, walk, and wheel was created to support mental health and combat burnout heading into the busy growing season. Participants simply sign up, run/walk/wheel 5 km, have open discussions about mental health, and check in with family, friends, and co-workers. Join us next spring!

JOURNEY 5KM

Use smartphone camera to scan code

Raise the Barn brings together independent retailers and community organizations to make a lasting difference in the communities in which we live and work. Partners put their creativity and ingenuity to the test to come up with an impactful idea to address a local need in the areas of Mental Health, Hunger, Education, or Community.

A VARIETY FOR EVERY FORAGE GOAL

Whether you're optimizing for tonnage or feed quality, CROPLAN alfalfa varieties are ready to perform. From the latest trait technologies to advanced seed treatment options, everything you need to succeed is right here.

FAST REGROWTH,
HIGH YIELD POTENTIAL

CROPLAN HVX MEGATRON WEST EAST
Fall Dormancy: 4.2
Winterhardiness: 1.7

HARVXTRA	
ADVANCED READY™ Technology	
Characteristics	
Yield	Fair
Persistence Index	Excellent
Feed Quality	
Grazing Tolerance	
Baled Hay (Drydown)	
Haylage (Regrowth)	

- Excellent yield and forage quality potential with the HarvXtra® alfalfa trait.
- H2 feed quality rating; exceptional soil disease resistance to help improve root and plant health.
- Highest resistance (HR+) rating to multi-race aphanomyces root rot disease (Races 1, 2, and EMR); resistant (R) to multi-race anthracnose (including Race 5).
- Excellent quality and yield potential with a 3- to 5-cut flexible harvest system based on geography.
- Seed coating provides improved early season plant health.

HIGH-QUALITY, BALED HAY

CROPLAN LEGENDAIRY AA WEST EAST
Fall Dormancy: 3.4
Winterhardiness: 1.1

Characteristics	Fair	Excellent
Yield		
Persistence Index		
Feed Quality		
Grazing Tolerance		
Baled Hay (Drydown)		
Haylage (Regrowth)		

- The latest generation of LegenDairy with the AA disease resistance package bringing yield potential to new levels.
- Highest resistance (HR+) rating to multi-race aphanomyces and anthracnose disease (including Race 5).
- Excellent choice for producers in northern growing regions east to west with second to none winterhardiness; ideal for baled hay or haylage harvest system.
- Great choice for producers who prefer mixed alfalfa-grass stands.
- Seed coating provides improved early season plant health.

HIGH PERFORMANCE, HIGH YIELD

KEY

Scale
1 = Excellent
2 = Above average
3 = Average
4 = Below average
5 = Fair

Product descriptions and ratings are generated from Answer Plot trials and/or from the genetics supplier and may change as additional data is gathered.

Resistance Ratings

S = Susceptible (0-5%)
LR = Low resistance (6-14%)
MR = Moderate resistance (15-30%)
R = Resistance (31-51%)
HR = High resistance (>50%)
HR+ = Highest resistance available on the market (>50%)

1 Fall Dormancy

A higher FD number = higher yield potential
More dormant = better forage quality

2 Winterhardiness

A lower WH number = more cold tolerance and stand persistence

3 Feed Quality Index

Feed quality ratings for HarvXtra® are represented on a separate scale than Roundup Ready® and conventional alfalfa varieties and are signified with an "H." Because there is a significant improvement in forage quality, HarvXtra alfalfa products can only be compared to other HarvXtra alfalfa products.

Note: Field tests are currently being used to select and validate true salt-tolerant varieties. Many soils that are high in salinity also have other problematic conditions. Therefore, germination and forage salt-tolerant ratings may not predict field performance.

4 Salt Germination Tolerance

G = Variety tolerance for germination under high saline conditions in petri dish tests
F = Variety tolerance for forage growth under high saline conditions as a potted plant in the greenhouse

STAFF
PICK

REBOUND AA

We grow this alfalfa variety on our dairy farm and it is an absolute rock star! It is well suited for intense management, four to five cuts per season due to fast re-growth, superb winterhardiness and extremely good resistance against soil borne diseases such as aphanomyces root rot.

CORN SEED THAT'S MORE THAN JUST SEED

When it comes to corn, high-end genetics are table stakes. CROPLAN hybrids go a level deeper. More than a decade of Answer Plot and trial data has delivered response-to scores to help growers understand the unique and optimal population, nitrogen and fungicide requirements for each specific hybrid. Plus, Zinc Seed Treatment comes standard on all CROPLAN hybrids to help protect your investment from the start at no extra cost. In fact, we're the only brand to offer that. It's a product combination you can't find anywhere else.

**LOOKING FOR DUAL PURPOSE OR SILAGE VARIETIES?
FLIP TO PAGE 34**

LEAVE AVERAGE IN THE DUST

CROPLAN seed uses the latest data to recommend which hybrids to choose and where to place them to get optimal bang for your buck.

GET AN EARLY-SEASON EDGE WITH ZINC

CROPLAN is the only seed brand to offer zinc as a standard treatment on all commercial hybrids to promote early-season growth and root development. Applied on-seed, zinc naturally enhances corn seeds by improving early seedling vigour and growth. Zinc seed treatment helps promote quicker emergence — even in cool, wet conditions — to help establish strong, healthy stands.

PACKAGING

SIZE ¹	WEIGHT
CROPLAN Precise Plateless (CPP)	30-33.9
CROPLAN Precise Flats (CPF)	34-43.9
CROPLAN Precise Rounds (CPR)	34-47.9
CROPLAN Precise Flats 2 (CPF2)	44-62.0
CROPLAN Precise Rounds 2 (CPR2)	48-68.0

1. Kernel count is 80,000 for all seed sizes.
- Please use CPF, CPR, CPF2 or CPR2 for plated planters.
- C-Box = 50 units, except CPF2 and CPR2 seed sizes where C-Box can be 40-45 units.

STAFF PICK

CP3790VT2P

This new corn variety is making waves—delivering top-end yield potential where it counts most. Built for highly productive soils, it consistently outperforms in the field and pushes the boundaries of what’s possible.

For more information on this product, visit page 29.

Regional Business
Lead | Eastern Canada

RESPONSE-TO SCORES

Get the right tools to make the best agronomic decisions for your corn crop. We use the latest technology to help determine which nutrients and crop protection products make the most sense for your acres and hybrids.

Our response-to scores offer an analytical evaluation of variables that a grower can influence. These ratings provide an understanding supported by data and analytics of how each hybrid responds to these key variables: plant population, nitrogen management, and fungicide usage.

W = Western Hybrid | E = Eastern Hybrid | RM = Relative Maturity | RTP = Response-to population | RTN = Response-to nitrogen | RTF = Response-to fungicide

DID YOU KNOW?

Almost 100% of CROPLAN corn hybrid seed production is grown in Canada, making them tried and tested for your local growing conditions.

Reach out to your CROPLAN partner today.

PLANT POPULATION

RESPONSE-TO POPULATION RANGE:
0.15 TO 20.3 BUSHELS

HYBRID PERFORMANCE AT DIFFERENT POPULATIONS

Response-to population (RTP) is an indicator of the hybrid's response to stress. Root, stalk, and ear flex are major factors. The higher you push planting populations, the more stress on the hybrid due to competition for nutrients, moisture, light, etc.

HYBRID POPULATION COMPARISON

Planting each hybrid at the right population is key to optimizing its performance potential. In the example below, note the ear flex and decrease in root size and stalk diameter when the hybrid has a low RTP. With the higher RTP characteristics and more fixed-ear hybrids, the hybrid with a high RTP maintains root diameter at higher plant densities.

LOW RTP HYBRID 24,000 30,000 36,000 42,000

HIGH RTP HYBRID 24,000 30,000 36,000 42,000

HIGH RTP SCORE

- Hybrid shows a potential yield gain with increasing populations
- Can be fixed-ear type hybrid
- Good plant integrity
- Strong pollination, dependable grain fill
- Overall good stress tolerance (nutrients and/or moisture) at high populations

MEDIUM RTP SCORE

- Hybrid is able to achieve high yields at moderately high populations
- Maintains yield at moderately low populations

LOW RTP SCORE

- Flex-ear-type hybrid with acceptable yield potential, even at low populations for a particular area
- Could be driven by low moisture or low nutrient stress tolerance at high populations
- Root and plant size decrease as population increases
- Development of smaller ears to ensure good grain fill
- May not tolerate increased stress at higher populations

NITROGEN MANAGEMENT

MANAGE ACCORDING TO RTN RATING:
26.1 BU/AC AVERAGE YIELD ADVANTAGE

HYBRID PERFORMANCE AT DIFFERENT N RATES

Be sure to consider the response-to nitrogen (RTN) scores of the hybrids you choose. Select hybrids with high RTN scores if you are planning to apply additional or late-season nitrogen, and hybrids with moderate or low scores for limited nitrogen exposure. Perform appropriate tissue testing to determine optimal application timing for nitrogen, which may help minimize the financial and environmental costs of applying too much.

HIGH RTN SCORE

- Respond to aggressive N rates
- Place in fields with history of manure
- Good fit for a legume rotation

MEDIUM RTN SCORE

- Respond well to high N fertility environments
- Don't require as high of N rates to remain productive
- Tend to be consistent performers in many different N environments

LOW RTN SCORE

- Tolerate stresses of less than optimal N rates better than other hybrids
- Utilize N more efficiently (early flowering, internal physiology, etc.)
- Can find more N from the soil (deep penetrating or large root system)
- Add stability in continuous-corn rotations

HOW TO USE RTN AND RTP

RTN and RTP scores can help you better manage individual fields and maximize productivity. Response-to scores allow us to better select the right product for your farm. Talk to your local CROPLAN distributor or WinField United representative for more information.

Response ranges and averages show the importance of how hybrids respond to each management practice to help ensure the highest yield potential. 2022 Answer Plot data from 178 locations. Due to factors outside of WinField United's control, such as weather, product application and any other factors, results to be obtained, including but not limited to yields, financial performance or profits, cannot be predicted or guaranteed by WinField United.

STAFF PICK

CP2130VT2P

This hybrid did great in trials last year. I am excited to see this new 81-day corn hybrid excel here in Manitoba. It is a nice-looking plant with really good drydown for grain.

For more information on this product, visit page 26.

WEST EAST

Jody Jury,
Market Development
Manager | Manitoba

FUNGICIDE USAGE

MANAGE ACCORDING TO RTF RATING:
19 BU/AC AVERAGE YIELD ADVANTAGE

HYBRID PERFORMANCE AND
FUNGICIDE APPLICATION

Response-to fungicide (RTF) considers a hybrid's response to fungicides, even in the absence of disease pressure. RTF scores help determine where a fungicide may increase yield potential.

LATE-SEASON FUNGICIDE TREATMENTS

- Under heavy disease pressure, split fungicide applications made during the V5 to V6 stage and around tasseling to R1 have been shown to be effective in preserving yield potential.
- Late-season fungicide treatments can be especially beneficial when applied to hybrids in corn-on-corn rotations.
- Thorough coverage is essential. Use plenty of water and be sure to select the right nozzle. Use a LockTech® product like MasterLock® or StrikeLock® to minimize drift.
- Fungicide use can improve standability, leading to improved harvestability.

BU/AC ADVANTAGE COMPARED TO UNTREATED CHECK

HIGH RTF SCORE

- Potential for high economic gain when a fungicide is used
- Great for productive fields with strong yield potential
- Potential for positive ROI even in the absence of disease

MEDIUM RTF SCORE

- Potential for good economic gain when a fungicide is used
- Place hybrid in productive or moderately productive fields
- Scout fields in season. If disease pressure is high a fungicide may provide a strong ROI

LOW RTF SCORE

- Lower potential for ROI on fungicide applications
- Hybrid maintains yield in lower productive areas where disease pressure is low to moderate
- Always scout in season to evaluate disease pressure regardless of response-to fungicide score

MasterLock®
By WINFIELD UNITED

When you invest in a fungicide application, ensure you're maximizing its disease control potential by adding MasterLock to the tank whenever a non-ionic surfactant is required. MasterLock combines best-in-class drift control and DropTight® Technology – a next generation surfactant – to help cover more leaf surface area and ensure more product penetrates the canopy. WinField United Answer Plot data has shown a 5.7 bu/ac average yield increase in corn when MasterLock is added to the fungicide application.

1 Response ranges and averages show the importance of how hybrids respond to each management practice to help ensure the highest yield potential. 2022 Answer Plot data from 178 locations. Due to factors outside of WinField United's control, such as weather, product application and any other factors, results to be obtained, including but not limited to yields, financial performance or profits, cannot be predicted or guaranteed by WinField United.

Test Weight

- Good stalks and roots.
- Excellent spring vigour.
- Excellent test weight with good drydown.
- Widely adapted to different environments.

- Well adapted for planting across yield environments and soil types.
- Strong early vigour and very good stress tolerance.
- Good ear flex at low populations and maintains ear size at high populations.
- Acceptable Goss's Wilt tolerance.

- High yield potential for productive soils with good stress tolerance for tougher acres.
- Strong early vigour for early planting; strong stalks late into season.
- Good ear flex for planting at reduced populations.
- Excellent grain quality with high test weight.

- Nice yield performance with very good drydown.
- Very good drought tolerance with broad adaptability.
- Very good test weight.
- Solid disease package.

- Broadly adapted hybrid with exceptional yield potential.
- Very good emergence and early plant vigour.
- Good stalks, roots, and drought tolerance.
- Good test weight with fast drydown.

- Versatile SmartStax® PRO hybrid for known corn root worm (CRW) acres.
- Strong stress tolerance and solid agronomics.
- Good ear flex with good drought stress for medium plant populations.
- Good emergence and early season vigour for cool planting conditions.

- Early flower with good drydown.
- Semi-flex ear that allows lower densities; but responds when pushed in populations.
- Good stalks and roots.
- Trecepta® trait for added western bean cutworm control.

- Broadly adapted hybrid with outstanding agronomics and yield.
- Strong emergence, stalks, roots, and drought tolerance.
- Low response-to nitrogen and response-to fungicide for cost-effective management.
- Medium to early flower with fast drydown.

- High yield potential hybrid with versatility.
- Strong drought tolerance allows placement on drier acres.
- Excellent emergence allows for early-plant option.
- Acceptable drydown.

- Excels in moderate to high yield environments and moves across all soil types.
- Strong stalk quality and root strength.
- Has good ear flex for low plant densities, but will respond to higher management.
- Excellent test weight, medium flower date.

- Excellent test weight and emergence with solid defensive traits.
- Versatile hybrid for all yield environments.
- Plant at moderate to high densities; fungicide application is recommended.
- Keep in relative maturity zone.

- Tall VT Double PRO® hybrid; outstanding yield potential.
- Strong agronomics across the board.
- High response-to fungicide; good candidate for fungicide application.
- Take advantage of terrific ear flex, plant at low to medium plant populations.

- Excellent grain quality.
- Above average stalk quality.
- Excellent agronomics for Eastern Canada.
- Girthy ear and semi-flex for moderate populations.

CORN SILAGE

CROPLAN

GET THE SEED AND EXPERTISE YOU NEED FOR SUCCESSFUL CORN SILAGE

Selecting for high-tonnage and high-quality are key when it comes to corn silage. CROPLAN seed can help with both, just look for the Data Proven logo. Only hybrids that consistently perform with high-quality and high-tonnage year after year in our trials earn our Data Proven logo. Looking for hybrids to support high-producing dairy and beef cattle? Explore our SilageFirst hybrids.

LOOKING FOR GRAIN CORN VARIETIES? FLIP TO PAGE 18

SILAGE PRODUCTS PROVEN BY DATA

Finding the best hybrid for your operation is a careful balance between tonnage and feed quality. The scatter graph below illustrates yield as tonnage per acre on the horizontal axis and milk per ton as quality on the vertical axis. The lines through the center represent the trial average.

- ✓ Each year, replicated corn silage trials are planted in select Canadian sites, in addition to the Answer Plot locations. After harvest, data is compiled and summarized over multiple years and locations to provide a performance snapshot.
- ✓ Summary data is compiled and computed using the University of Wisconsin MILK2006 milk-per-ton value, then plotted on a scatter graph to show the relationship between quality and tonnage potential for each hybrid.
- ✓ For most operations, selection will be based on hybrids in the high-quality, high-tonnage quadrant to ensure optimal production potential.
- ✓ CROPLAN corn silage hybrids that consistently perform in this high-quality and high-tonnage quadrant are marked with the Data Proven logo.

SATISFY YOUR NUTRITION NEEDS

Your nutritionist can determine the parameters for nutrient needs and, leveraging data, your WinField United representative or local CROPLAN distributor can help to position each hybrid for optimal performance based on multiple variables.

- Great early option.
- Works well across most environments.
- Attractive plant type with solid agronomic package.
- Excellent staygreen for wider silage window.

- Consistent yield potential and quick out of the ground.
- Very early flowering product with fast drydown.
- Mostly fixed, girthy ear with good tip fill.
- Excellent moisture stress tolerance in cool environments.

- Solid early season hybrid for dual-purpose silage.
- Excellent staygreen for wider silage window.
- Above average drought tolerance for increased quality consistency.
- Excels in high yielding environments.

- Excellent emergence and seedling vigour.
- Consistent yield potential with excellent vigour.
- Girthy ear with good tip fill for clean quality silage.
- Handles tough, variable yield environments.

- Dual-purpose silage with high tonnage potential.
- Take advantage of ear flex for maximum quality potential.
- Good plant health and staygreen for high quality silage.
- Very good drought stress tolerance.

- Excellent on low to medium yield environments.
- Strong ear flex with a moderate response-to nitrogen; broad range of growing conditions.
- Excellent seedling vigour for early planting.
- Above average drought tolerance.

Market Development
Manager | Ontario

CHOOSING THE RIGHT ABOVE- AND BELOW-GROUND TRAIT PACKAGE FOR CORN

Selecting the most effective trait package for your corn hybrid requires a thorough understanding of pest pressures, field history, and long-term agronomic goals. One of the most persistent and economically damaging threats to corn production is corn rootworm. As this pest continues to evolve, choosing the right combination of traits is essential to safeguard yield potential and maintain sustainable management practices.

ROOTWORM

Rootworm has been a growing concern, and understanding the signs of pressure and what tools are available to meet your specific needs are important to understand before choosing a trait package. Continuous corn rotations are at higher risk for rootworm, and we can see rootworm larvae feed on corn roots. This causes stunting and goose necking (lodging), and therefore reducing yield potential significantly. There are three options to choosing a hybrid with below ground rootworm control.

Over the past decade, **SmartStax®** has delivered effective rootworm protection. Offering multiple modes of action for both above and below ground insect control, SmartStax has delivered consistent performance in fields with high pest pressure. Building on this success, **SmartStax® PRO with RNAi Technology** was introduced with an advanced trait stack that includes a new mode of action using RNA interference (RNAi) technology. This innovative approach gives a total of three modes of action against rootworm. The newly released **VT4PRO® with RNAi Technology** trait package is designed to meet the evolving needs of growers with more targeted insect control requirements. Like SmartStax PRO, VT4PRO includes RNAi technology for rootworm, but is positioned primarily for fields with low to moderate rootworm pressure. Where VT4PRO excels is in its enhanced above-ground insect protection similar to Trecepta (broad spectrum control for above ground pests like armyworm), with expanded control of pests such as western bean cutworm and earworm. These pests can significantly impact grain quality and yield. CROPLAN is pleased to offer the all new VT4PRO CP3540VT4P variety for 2026.

STAFF PICK

CF956SSS

An oldie but a goodie! A great floury-leafy hybrid that produces some serious tonnage in all growing areas and will contribute to high energy in your feed ration. This is the only leafy in our portfolio that offers a Bt trait package which will protect you from both above and below ground insects. Grow this one on your corn-on-corn acre.

GRAIN VS SILAGE

	IDEAL GRAIN	IDEAL SILAGE
YIELD	High grain yield with high test weight.	High total plant yield of digestible forage.
KERNEL MOISTURE	Adequate drydown for harvest.	50% milk line for as long as possible at silage harvest time.
KERNEL HARDNESS	As hard as possible to decrease possibility of breakage.	Soft and easily broken for maximum digestion in the rumen.
KERNEL SIZE	Ideal size for transport and storage.	Large to increase possibility of breakage.
STALK MOISTURE	Wet to keep plant alive as long as possible to reach ideal grain harvest.	Dries to achieve 65% total plant moisture and stays in that range to extend harvest window.
STALK INTEGRITY	As stiff and solid as possible for late season grain harvest.	As soft and flexible as possible, yet strong enough to remain standing through late silage harvest.
EAR HEIGHT	High position on the plant to ensure harvest by combine.	Low position on the plant to increase proportion of digestible fiber above the ear.
IDEAL AT HARVEST	Wet strong stalk that supports ears of vitreous, hard, dry kernels.	Large plant with a soft stalk and moist ear of large breakable kernels. Stalk and ear dry at a complementary rate.

Grow your savings from seed to harvest.

The BayerValue™ Rewards Program lets you maximize your savings on every acre. With the largest selection of participating trait and crop protection products, it's never been easier to save. Don't miss out – sign up today.

SOYBEAN

SUCCESSFUL SOYBEAN ACRES START RIGHT HERE

A successful soybean season is measured by more than yield. It's all about the ROI. CROPLAN soybean varieties contain high-end genetics and top-tier yield potential, but that's not all. When you choose CROPLAN seed, you get local expertise and data-backed management recommendations to help optimize your profit potential for every soybean acre. See what our WinPaks have to offer!

MANAGE VARIABILITY LIKE A BOSS WITH WINPAK SOYBEANS

WinPak® combines two high yielding soybean varieties in one bag, so you can confidently seed without second guessing. Seeds are carefully paired to provide complementary characteristics such as region-specific disease and drought tolerance, standability, yield potential, and more.

HOW IS WINPAK SEED SELECTED?

- Designed to mitigate risk across the whole field: more stability on variable acres, high yield potential on productive acres, and consistency in more challenging acres.
- Seed is strategically paired to provide growers complementary agronomic features for optimal performance in their specific region.
- Varieties are selected with similar maturities to ensure consistent drydown in the field.

MANAGING VARIABILITY

- Planting diverse soybean varieties can help balance contrasting soil types, improving overall field management.
- WinPak varieties help to capitalize on your top-end yield potential in the better areas of the field and offer solid defence in areas with greater soil variability.
- Helps to balance the variability inherent in other factors that affect yield potential, such as weather.

WinPak®

COMPONENT A

COMPONENT B

STAFF PICK

CP0922WPX

I like the broad adaptability of the CP0922WPX. Its high yield potential with a mix of great disease tolerance makes it a perfect WinPak choice.

SOYBEAN HERBICIDE TOLERANCE AND WEED CONTROL

Enlist® corn and Enlist E3® soybeans offer significant advancements in herbicide tolerance, providing growers with maximum flexibility for their in-crop herbicide applications. The Enlist system is tolerant to **glufosinate**, **glyphosate**, and **2,4-D choline**, allowing for versatile weed management. However, in tight crop rotations where both Enlist corn and Enlist E3 soybeans are grown, managing volunteer corn in the soybean year becomes a challenge. Volunteer corn can be effectively controlled using a **-dim graminicide**, such as **clethodim**. WinField United offers Antler® 360 Unpacked (separate adjuvant required) as a reliable option for controlling volunteer corn in these situations.

BEST PRACTICES FOR SPRAYING ANTLER 360 UNPACKED

OIL

Use a surfactant at 0.5% v/v, such as StrikeLock, Journey® HSOC, or Destination® MSO. Corn, being a vertical grass with a waxy cuticle, requires both retention and penetration, of the herbicide. An MSO-based product, such as StrikeLock, can be effective.

WATER QUALITY

Consider your water quality. Any 'dim' is particularly sensitive to hard-water tie-up. Consider adding Crimson NG to prevent cations from tying up the Antler 360 Unpacked. In the presence of a dense crop canopy or heavy weed infestation, spray at 10gal of water for optimal coverage.

TIMING

Best results are generally achieved when the volunteer corn is at the 3-5 leaf stage, and the soybeans are no later than the 3rd trifoliate.

• Good stress tolerance.

NOTES :

Enlist E3™ soybean varieties are now available. Using the Enlist weed control system, farmers can take control of resistant and hard-to-control weeds.

The Enlist™ weed control system will change how you think about weed management in soybeans.

WHY USE THE ENLIST WEED CONTROL SYSTEM?

- A system with new traits providing herbicide tolerance in soybeans and corn
- Herbicide solutions built on an improved form of 2,4-D that lands and stays on target, enables management of hard-to-control and resistant weeds with Group 4 herbicides
- Enlist Stewardship resources that support the use of multiple modes of action to manage resistant weeds, provide training, and promote responsible and sustainable use

Enlist E3™ Soybeans

Enlist E3 soybeans provide high-yielding soybean genetics and industry leading triple-mode of action herbicide tolerance.

WHY USE ENLIST E3 SOYBEANS?

- Enlist E3 soybeans are tolerant to 2,4-D, glyphosate and glufosinate herbicides, which are part of a strong resistance management strategy
- Excellent crop tolerance enabling applications up to the R2 growth stage

with COLEX-D[®] technology

HERBICIDE

COMPLETE CONVENIENCE.

Enlist Duo provides the convenience of both 2,4-D choline and glyphosate in one formulation for control of grasses and broadleaf weeds including hard-to-control and resistant weeds.

Dig the sweet new sound of Vayantis® IV RFC
soybean seed treatment!

With four modes of action – including new breakthrough chemistry – you get next-level performance against a wide range of early season diseases, including *Phytophthora*. Plus – the added benefit of Rooting Power® helps build stronger roots, for a soybean stand that can get rockin', rollin' and yielding, even in tough spring conditions.

Visit Syngenta.ca/VayantisIVRFC to see how Vayantis® IV RFC can help you have a smash hit start to the season.

Always read and follow label directions. Vayantis®, Rooting Power®, the Alliance Frame and the Syngenta logo are trademarks of a Syngenta Group Company. © 2025 Syngenta.

NOTES :

SUNFLOWER

THERE'S A REASON WE ARE A TRUSTED CHOICE IN SUNFLOWER SEED

WinField United Canada brings you a high yielding, award-winning sunflower lineup. Our hybrids are brimming with what matters most – high yield potential, early maturity, and oil-premium potential. Dive in for an up close look at some of the best sunflower seed genetics for your operation.

TARGET YOUR MARKETS AND HOLD NOTHING BACK

In the seed business, experience matters. Through extensive testing and screening with the Answer Plot program, we've brought some of the best sunflower seed genetics to Canada, giving you the best options for your operation.

The genetics we offer can help manage disease pressure in your fields, with hybrids that can be positioned based on specific field stresses. Plus, we've incorporated the latest traits in our portfolio, too. That's technology – and experience – you can count on.

A STRONG START FOR A STRONG FINISH

CROPLAN sunflower seed treatment provides the protection you need to get your crop off to a strong start.

NEXT-GENERATION SEED TREATMENT FOR DOWNY MILDEW PROTECTION

Plenaris® fungicide is the latest addition to CruiserMaxx® Sunflower, the most comprehensive seed treatment on the market. CruiserMaxx Sunflower with Plenaris provides multiple modes of action, delivering the most sustainable, best-performing downy mildew management program in the industry. It also provides the broadest disease and insect protection available to maximize the genetic potential of sunflowers.

PLENARIS BENEFITS

- Provides excellent protection against all downy mildew races
- Outstanding activity on susceptible and resistant sunflower varieties

PROTECTION FROM INSECTS

All CROPLAN sunflower seed now comes Fortenza treated! This high-quality seed treatment protects against cutworms and wireworms, helping your crop get off on the right foot.

STAFF PICK

CP455E

From 2020-2024, CP455E has consistently led the pack in yield in Manitoba Provincial Sunflower Trials! Over the last five years, this sunflower was 120% of the leading industry check. If you haven't tried the CP455E sunflower, this is your time to get some; and with Fortenza on your seed, nothing will stop you this spring!

For more information on this product, visit page 57.

Jody Jury,
Market Development
Manager | Manitoba

PEST MANAGEMENT

TOP TIER PERFORMANCE

CROPLAN sunflowers have been a top performer in the Manitoba provincial trials since they were brought to our product lineup in 2021. Over the last four years, we've placed in the top four spots each year! With CP432E averaging 110% of the trial checks and CP455E averaging 120% – you can be confident in the yield of CROPLAN sunflowers!

WEED CONTROL

- Use pre-emergence herbicide treatments or preplant-incorporated herbicides to combat kochia and Russian thistle.
- The DuPont™ ExpressSun® trait is tolerant to Express® herbicide with Group 2 mode of action.
- Express herbicide can be applied from the 2-8 leaf stage, and may be applied a second time for later flushes if required.
- Add Marshall® Unpacked or Antler 360 Unpacked to the tank mix for grassy weed control.

ADJUVANTS 101

- Express herbicide requires an NIS if sprayed on its own. Choose HiActivate® or MasterLock
- Antler 360 Unpacked requires an MSO (StrikeLock, Journey HSOC or Destination MSO) or MasterLock
- Marshall Unpacked requires an MSO (StrikeLock, Journey HSOC or Destination MSO) or an NIS (MasterLock or HiActivate)

CROPLAN **CP432E** WEST EAST
Early Maturity

ExpressSun® trait	
Characteristics	Fair
Stalk Quality	Excellent
Phomopsis	
Oil Content	
Drydown	

- High yield potential for early maturity.
- Shorter plant height with great standability in higher populations; very uniform.
- DMR PI 8; resistant to all common races of downy mildew.
- Great for birdseed and dehull markets.
- Utilize higher populations if pushing yield goals higher; has also shown yield response to higher available nitrogen.

STAFF PICK
CROPLAN **CP455E** WEST EAST
Mid-Maturity

ExpressSun® trait	
Characteristics	Fair
Stalk Quality	Excellent
Phomopsis	
Oil Content	
Drydown	

- High oleic top performing sunflower with consistent plot wins.
- Widely adapted across regions and field conditions.
- Medium plant with excellent drydown.
- DMR PI 6; resistant to most common races of downy mildew.
- Good drought response along with sclerotinia tolerance for higher moisture years.

Enlist E3® soybeans contain the Enlist E3 trait that provides crop safety for use of labeled over-the-top applications of glyphosate, glufosinate, and 2,4-D herbicides featuring Colex-D® technology when applied according to label directions. Following burndown, the only 2,4-D containing herbicide products that may be used with Enlist® crops are products that feature Colex-D technology and are expressly labeled for use on Enlist crops. 2,4-D products that do not contain Colex-D technology are not authorized for use in conjunction with Enlist E3 soybeans. **WARNING:** Enlist E3 soybeans are tolerant of over-the top applications of glyphosate, glufosinate, and 2,4-D. Accidental application of incompatible herbicides to this variety could result in total crop loss. When using 2,4-D herbicides, the grower agrees to only use 2,4-D products that contain Colex-D technology authorized for use in conjunction with Enlist E3 soybeans. Always read and follow herbicide label directions prior to use.

To plant this seed, a Grower must sign a Technology Use Agreement, read the Product Use Guide prior to planting. This seed is acquired under an agreement that includes the following terms: These seeds are covered under Corteva Agriscience and MS Technologies Patent Rights which can be found at: www.corteva.ca/en/trait-stewardship.html. In consideration of the foregoing, Corteva Agriscience grants to the Grower the limited license to use its technology to produce only a single commercial crop in Canada under the terms and conditions set forth in the Technology Use Agreement in effect at the time of planting of this seed.

A license must first be obtained from Corteva Agriscience by signing a Technology Use Agreement and abiding by the terms and conditions of the Product Use Guides for all technologies in this seed, including the Herbicide Resistance Management (HRM), and Use Requirements detailed therein which can be found at www.corteva.ca/en/trait-stewardship.html. The transgenic soybean event in Enlist E3® soybeans is jointly developed and owned by Corteva Agriscience and M.S. Technologies, L.L.C. ®TM Enlist, Enlist E3, the Enlist E3 logo, and Colex-D are trademarks of Corteva Agriscience.

Bayer is a member of Excellence Through Stewardship® (ETS). Bayer products are commercialized in accordance with ETS Product Launch Stewardship Guidance, and in compliance with Bayer's Policy for Commercialization of Biotechnology-Derived Plant Products in Commodity Crops. These products have been approved for import into key export markets with functioning regulatory systems. Any crop or material produced from these products can only be exported to, or used, processed or sold in countries where all necessary regulatory approvals have been granted. It is a violation of national and international law to move material containing biotech traits across boundaries into nations where import is not permitted. Growers should talk to their grain handler or product purchaser to confirm their buying position for these products. ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. It is a violation of federal law to use any pesticide product other than in accordance with its labeling. NOT ALL formulations of dicamba or glyphosate are approved for in-crop use with products with Roundup Ready 2 Xtend® soybeans. NOT ALL formulations of dicamba, glyphosate or glufosinate are approved for in-crop use with products with XtendFlex® Technology. **ONLY USE FORMULATIONS THAT ARE SPECIFICALLY LABELED AND APPROVED FOR SUCH USES.** Contact the Pest Management Regulatory Agency with any questions about the approval status of dicamba herbicide products for in-crop use with Roundup Ready 2 Xtend® soybeans or products with XtendFlex® Technology.

Roundup Ready® Technology contains genes that confer tolerance to glyphosate. Roundup Ready® 2 Technology contains genes that confer tolerance to glyphosate. Products with XtendFlex® Technology contain genes that confer tolerance to glyphosate, glufosinate and dicamba. Roundup Ready 2 Xtend® soybeans contain genes that confer tolerance to glyphosate and dicamba. Glyphosate will kill crops that are not tolerant to glyphosate. Dicamba will kill crops that are not tolerant to dicamba. Glufosinate will kill crops that are not tolerant to glufosinate. Contact your Bayer retailer, refer to the Bayer Technology Use Guide, or call the technical support line at 1-800-667-4944 for recommended Roundup Ready® Xtend Crop System weed control programs.

Insect control technology provided by Vip3A is utilized under license from Syngenta Crop Protection AG.
